Engineering

■ Engineering comfort ventilation	1359
-----------------------------------	------

Hoval HomeVent® ER (200-400)
Comfort ventilation unit

- Comfort ventilation unit with self-regulating heat and humidity recovery for any installation position.
- For use within or outside the insulated building shell.
- High-quality, heat and sound insulated inner casing made from EPP.
- External casing made of film-coated sheet steel (red).
- The casing is suitable for installation on both sides (accessible on both sides)
- Rotary enthalpy recovery unit with speed regulation
- Two backward-curved EC fans (continuously adjustable 15-100 %)
- High-quality filter
 - supply air: ePM_{1,0} 55 % (F7)
 - extract air: ePM₁₀ 60 % (G4)
- Integrated prefilter
- Filter monitoring (timer)
- Ready-to-connect electronics
- No need for preheating or a condensate drain

Data

- Colour: red
- Dimensions:
L x W x H: 560 x 374 x 1000 mm
Weight: 31 kg
- Electrical connection: 230 V/50 Hz, IP 40

Required accessories:

- Standard operator terminal BG02 E or
- TopTronic® E room control module comfort plus

Options

- Air quality sensor VOC or CO₂
- Active cool recovery (CoolVent® option)
- Mounting set, base, IsiCube
- Supply air activated carbon filter

Delivery

- Comfort ventilation unit pre-assembled and packed.

On site

- 8-pin CAT 5 patch cable (parallel, not crossed) between comfort ventilation unit and operator terminal
- 230 V socket

Use

The HomeVent® comfort ventilation unit provides centralised supply and extract air handling for residential spaces. This can be a single family home or a residential unit in a multi-family house. The comfort ventilation unit is part of the HomeVent® ventilation system for comfort ventilation, which performs the following tasks:

- Supplies residential and commercial space with outdoor air
- Extracts used air (CO₂, aerosols, excess dampness, odours, etc.)
- Saves energy through intelligent latent heat recovery
- Cleans supply air using a fine dust filter

Tests

- TÜV Süd according to EN 13141-7
- TÜV Süd according to EN 60335-1

Model range

HomeVent® ER type		Flow rate m³/h	Heat recovery efficiency %
(200)	A+	30-200	90-130
(300)	A+	45-300	90-130
(400)	A	60-400	90-130

Energy recovery

The built-in enthalpy recovery unit withdraws energy from the extract air and transfers it to the supply air. This enables the intelligent (temperature) and the latent (humidity) energy to be transferred. The transmission performance is regulated depending on the outdoor temperature.

The advantages of the enthalpy recovery unit are:

- Temperature efficiency up to 90 %
- Degree of humidity recovery up to 95 %
- Steplessly controlled transmission performance
- No preheating required (down to -20 °C)
- No condensation
- No bypass required

Air filtration

The outdoor air goes through two cleaning stages, reaches the highest standard. A fine-meshed grate (washable) at the entry of the unit prevents insects, leaves, etc. from reaching the unit. When the outdoor air leaves the unit, it flows through a high-capacity fine pollen filter (ePM_{1.0} 55 % (F7)). The operator receives a message when it is time to change the filter. The activated carbon filter can be inserted in place of the standard supply air filter. This is a high-capacity filter (ePM_{2.5} 50 %) with high efficiency against particles (pollen, fine dust, etc.) and against gaseous pollutants and odours (agriculture, traffic, etc.).

Air delivery

Two backward-curved centrifugal fans with EC direct current motors deliver the air. The rotating wheel made of high-tech composite material is produced in one piece with optimised fluid mechanics, and ensures quiet operation of the unit. The electronics built into the engine enable the air volumes to be finely regulated between 15 and 100 %. The fans are arranged in such a way that no extract air can find its way to the supply air.

Suitability for winter

Due to the built-in enthalpy recovery unit, no condensate is formed in the unit. No preheating (electric air heater) is necessary for outdoor temperatures down to -20 °C. The flow rate ratio between supply and extract air is not changed.

Summer operation

The energy recovery is automatically reduced to a minimum at high outdoor temperatures. This enables night cooling (free cooling) in the summer as well as when the seasons change. It is not necessary to arrange for a bypass via dampers and a drive. In addition, the CoolVent® option can recover cold in air-conditioned buildings. The hot outdoor air is cooled and dried with the air-conditioned extract air.

Installation

The HomeVent® comfort ventilation unit is characterised by a compact design. It is possible to access the unit from both sides for servicing. No condensate forms in the unit, meaning that it can be installed in any position imaginable. We recommend the corresponding mounting sets with vibration dampers for the different installation positions.

Standard operator terminal BG02 E

The operator terminal consists of a plastic casing for on-wall mounting. The target air volume and the target air humidity can be set with two rotary knobs. With the party button, the air volume can be increased for a limited period of time. The connection to the HomeVent® comfort ventilation unit is made via RJ45 plug connection. The unit can also be installed in a secondary room.

TopTronic® E room control module comfort plus

The TopTronic® E room control module comfort plus is available either with a black or white design, operated by a colour touchscreen (4.3 inch). The connection to the HomeVent® comfort ventilation unit is made via RJ45 plug connection or plug terminals (max. 0.75 mm²). The unit can be installed on the wall with an on-wall mounted frame or with a wall-mounting plate and flush-mounted boxes. The unit can be installed in a secondary room.

Functional possibilities:

- Operation of all Hoval units connected to the bus.
- Authorisation management for operation.
- Efficient control of the ventilation system by working with day programmes
- Selection between different start screens possible during commissioning.
- Customer-specific configuration of the screen for displaying the following elements:
 - Date and time
 - Moon phases
 - Current air volume in %
 - Maximum target humidity in %
 - Active day or week programme
 - Display of current room air quality (optional VOC or CO₂ air quality sensor must be installed for this purpose)
 - Display of the current weather or the weather forecast (only possible in combination with HovalConnect)

Air quality

Optionally, a VOC or CO₂ air quality sensor can be installed in the unit during commissioning. In addition, an activated carbon filter can be installed on the supply air side as an option. The VOC air quality sensor(s) continuously monitor(s) the air for volatile organic components and regulate the air volume that is supplied or extracted via the speed of the fans. This results in optimal air quality in the building with minimal energy input.

- VOC air quality sensor on the extract air side:
 - The extract air is continuously monitored for odours, tobacco smoke, cleansing agents, etc. If the concentration of the extract air exceeds a certain value, the air volume is increased correspondingly. The sensitivity can be chosen. On the TopTronic® E room control module comfort plus, the air quality is displayed by a bar, which will either be green (good air), orange (slightly contaminated air) or red (bad air).

Cooling

The fresh air can be pre-cooled using the CoolVent® option. However, this requires an air-conditioning system to be present in order to provide the necessary cooling in the room. The enthalpy recovery system extracts heat and humidity from the warm outdoor air and feeds it to the cold extract air. The energy consumption of the air-conditioning system is thereby reduced. The efficiency for this process is 85 %. The CoolVent® function is activated during commissioning.

Function HomeVent® ER (200-400)

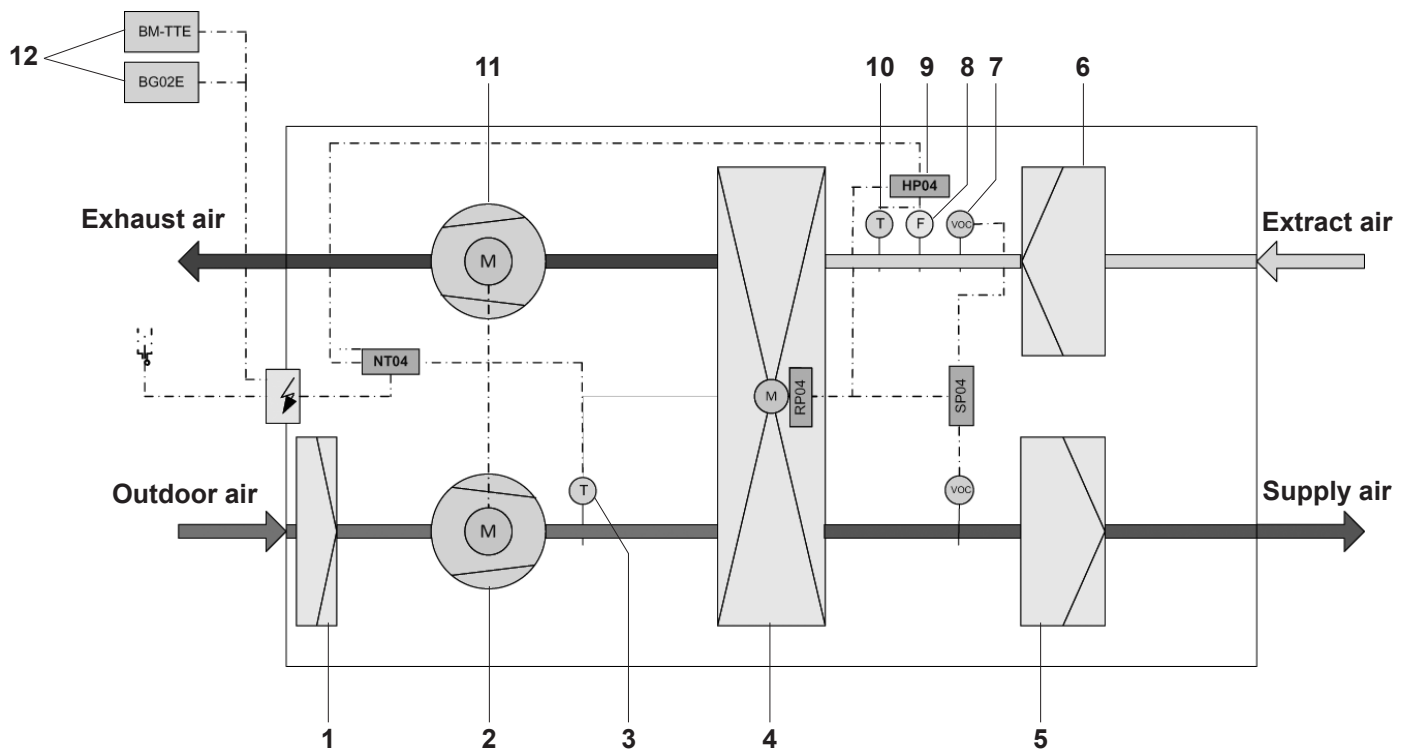

The outside air fan draws in outdoor air via the main line. In the first stage, this air is cleaned via a prefilter. In the enthalpy recovery system, the supply air is heated, depending on the temperature, and humidified. The extent to which heat and humidity are recovered is dependent on the temperature and humidity differences between the exhaust air and the outdoor air as well as on the rotor speed. Then the pre-treated outdoor air is cleaned by means of a pollen fine dust filter. The exhaust air fan sucks in the used air via the coarse dust filter.

The enthalpy recovery system extracts heat and humidity from the air and passes these to the supply air. The way the fans are positioned – with overpressure on the supply air side and underpressure on the extract air side – means that no extract air can find its way to the supply air.

The electronic controls and the operator terminal feature the following additional functions:

- The speed of the enthalpy recovery system is regulated by the outdoor temperature. In this way, the heat and humidity recovery is adjusted automatically.
- The humidity regulation changes the flow rate. Thus, if the humidity indoors is too high, for instance, more dry air is introduced from the outside.
- The functions of the unit are continuously monitored. In case of a malfunction, the device is switched to “fault” mode. The malfunction is displayed on the operator terminal.

Comfort ventilation unit

HomeVent® ER (200-400)

Comfort ventilation unit for ventilating a residential unit with high-efficiency heat and humidity recovery for any installation positions.

HomeVent® ER type		Nominal flow rate m³/h	Ext. pressure Pa
(200)		200	100
(300)		300	100
(400)		400	100

Part No.

7018 079
7018 081
7018 665

Required accessories

Operator terminal BG02 E

for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Plastic housing for on-wall mounting.
Knob for flow rate and room air humidity.
Service and fault display.

2066 444

TopTronic® E room control module comfort plus white

for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Operation of all Hoval ventilation units, heating and hot water circuits connected to the bus system.
Customer-specific configurable start screen.

6037 072

incl. fitting accessories

TopTronic® E room control module comfort plus black

for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Operation of all Hoval ventilation units, heating and hot water circuits connected to the bus system.
Customer-specific configurable start screen.

6042 543

incl. fitting accessories

Technical information
see separate chapter.

Recommended accessories

VOC air quality sensor
for HomeVent® comfort FRT (251-451) and ER (200-400)
Can be installed on extract air side
Only in connection with the TopTronic® E room control module comfort plus.

Part No.

6058 206

CO₂ air quality sensor
for HomeVent® comfort FRT (251-451) and ER (200-400)
Can be installed on extract air side
Only in connection with the TopTronic® E room control module comfort plus.

6058 211

Notice

CO₂ sensor cannot be combined with VOC sensor

Cool recovery unit CoolVent®
for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Active-controlled cool recovery for air-conditioned buildings.
Activated by Hoval service technicians during commissioning.

6035 255

Unit base ER 200-400
for HomeVent® comfort FR (201-301), ER (200-400)
Red painted steel (device colour)
incl. 4 vibration dampers
height-adjustable feet
Height: 475-500 mm

6052 203

Horizontal wall mounting set
for HomeVent® comfort FR (201-301), ER (200-400)
Steel bracket red coated
with vibration-damping support

6042 303

Vertical wall mounting set
for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Steel bracket red coated
with vibration-damping support

6046 215

Ceiling mounting set
for HomeVent® comfort FR (201-301), ER (200-400)
Steel bracket red coated
with vibration-damping support

6042 305

Floor mounting set
for HomeVent® comfort FR (201-301), ER (200-400)
Steel bracket red coated
with vibration-damping support

6042 306

Floor mounting set upright
for HomeVent® comfort FR (201-301), ER (200-400)
4 vibration-damping supports
80 x 60 x 30 mm

6044 961

Plywood 12 x 90
 consisting of:
 galvanised steel plate
 8 90° elbows
 4 straight nozzles

Part No.

6050 554

Acoustic insulating box for plywood 12 x 90
 for HomeVent® ER (200-400)
 Casing made from red foil-plated sheet steel
 Connection nozzle 2 x DN 160/180
 Can be screwed onto plywood
 Acoustic insulating body on supply and extract air sides,
 access panel, incl. throttle orifices
 Dimensions (L x W x H):
 440 x 560 x 374 mm

6056 894

Acoustic insulating box SDB-160-400
 for HomeVent® ER (200-400)
 Casing made from red foil-plated sheet steel
 Connection nozzle 4 x DN 160/180
 Acoustic insulating body on supply and extract air sides
 Dimensions (L x W x H):
 400 x 560 x 374 mm

6051 854

Distribution box VTB-160 12 x 75
 for HomeVent® ER (200-400)
 Casing made from red foil-plated sheet steel
 Connection nozzle 2 x DN 160/180
 Connection nozzle 12 x DN 75
 Acoustic insulating body on supply and extract air sides,
 access panel, incl. throttle orifices
 Dimensions (L x W x H):
 480 x 560 x 374 mm

6051 800

Distribution box VTB-160 12 x 90
 for HomeVent® ER (200-400)
 Casing made from red foil-plated sheet steel
 Connection nozzle 2 x DN 160/180
 Connection nozzle 12 x DN 90
 Acoustic insulating body on supply and extract air sides,
 access panel, incl. throttle orifices
 Dimensions (L x W x H):
 480 x 560 x 374 mm

6051 802

Distribution box VTB-160 18 x 75 3R
 for HomeVent® ER (200-400)
 and acoustic insulating box SDB-160-400
 Casing made from red foil-plated sheet steel
 Connection nozzle 2 x DN 160/180
 Connection nozzle 18 x DN 75
 Acoustic insulating body on supply and extract air sides,
 access panel, incl. throttle orifices
 Dimensions (L x W x H):
 480 x 560 x 374 mm

6051 904

Notice
 Use only in conjunction with additional silencers.

Filter HomeVent® ER (200-400)

**Supply air filter FR (201-301),
ER (200-400)**
for HomeVent® comfort FR (201-301)

HomeVent® comfort ventilation unit

Installation with vibration dampers

Vertical wall installation: S-WV

Horizontal wall installation: S-WH

Ceiling installation: S-D

Floor installation: S-B

Floor installation: upright

Detail A

Detail B

Can be installed in any position.

Plywood and acoustic insulating box for plywood 12 x 90

Casing made of red foiled sheet steel with sound insulation elements on supply air and extract air sides, can be screwed onto plywood 12 x 90

Connection nozzles:
2 x DN 160/180

Distribution cases DN 160

Distribution box VTB-160 12 x 75 resp. 90

Casing made of red foiled sheet steel with access panel.
Sound insulation elements on supply air side and extract air side.

Connection nozzles:

2 x DN 160/180

SUP 6 x 75, EXT 6 x 75

SUP 6 x 90, EXT 6 x 90

Included accessories: end caps and throttle orifices

Distribution box VTB-160 12 x 75

Distribution box VTB-160 12 x 90

Distribution box VTB-160 18 x 75 3R

Casing made of red foiled sheet steel with access panel.
 Sound insulation elements on supply air side and extract air side.
 Additional silencer recommended
 Connection nozzles:
 2 x DN 160/180
 SUP 9 x 75, EXT 9 x 75
 Included accessories: end caps and throttle orifices

Hoval HomeVent® comfort FRT (251-451)
Comfort ventilation unit

- Comfort ventilation unit with self-adjusting heat and humidity recovery.
- For use within or outside the insulated building shell.
- High-quality, heat and sound insulated inner casing made from EPP.
- External casing made of film-coated sheet steel (red).
- Unit can be installed upright using the mounting set or the base.
- Rotary enthalpy recovery unit with speed regulation
- Two backward-curved EC fans (continuously adjustable 15-100 %)
- High-quality filter
 - supply air: ePM_{1,0} 55 % (F7)
 - extract air: ePM₁₀ 60 % (G4)
- Integrated prefilter
- Filter monitoring (timer)
- Ready-to-connect electronics
- No need for preheating or a condensate drain

Data

- Colour: red
- Dimensions:
L x W x H: 560 x 560 x 925 mm
Weight: 39 kg
- Electrical connection: 230 V/50 Hz, IP 40

Required accessories:

- Standard operator terminal BG02 E or
- TopTronic® E room control module comfort plus

Options

- Air quality sensor VOC or CO₂
- Active cool recovery (Option CoolVent®)
- Mounting set, base, IsiCube
- Supply air activated carbon filter

Delivery

- Comfort ventilation unit pre-assembled and packed.

On site

- 8-pin CAT 5 patch cable (parallel, not crossed) between comfort ventilation unit and operator terminal
- RJ45 socket
- 230 V socket

Use

The HomeVent® comfort ventilation unit provides centralised supply and extract air handling for residential spaces.

This can be a single family home or a residential unit in a multi-family house.

Office rooms, conference rooms and cloak-rooms are also ideal applications.

The comfort ventilation unit is part of the HomeVent® ventilation system for comfort ventilation, which performs the following tasks:

- Supplies residential and commercial space with outdoor air
- Extracts used air (CO₂, aerosols, excess dampness, odours, etc.)
- Saves energy through intelligent latent heat recovery
- Cleans supply air using a fine dust filter

Tests

- TÜV Munich in accordance with DIN EN 13141-7
- TÜV Munich in accordance with DIBt
- TÜV Munich in accordance with EN 60335-1
- Type approval (DIBT) Z-51.3-448

Model range

HomeVent® comfort FRT type		Flow rate m ³ /h	Heat recovery efficiency %
(251)	A⁺	50-250	90-130
(351)	A⁺	60-350	90-130
(451)	A	70-450	90-130

Energy recovery

The built-in enthalpy recovery unit withdraws energy from the extract air and transfers it to the supply air. This enables the intelligent (temperature) and the latent (humidity) energy to be transferred. The transmission performance is regulated between 0 and 100 % depending on the outdoor temperature.

The advantages of the enthalpy recovery unit are:

- Temperature efficiency up to 90 %
- Degree of humidity recovery up to 95 %
- Transmission performance can be adjusted continuously
- No preheating required (down to -20 °C)
- No condensation
- No bypass required

Air filtration

The outdoor air goes through two cleaning stages, ensuring the highest standard. A fine-meshed grate (washable) at the entry of the unit prevents insects, leaves, etc. from reaching the unit. When the outdoor air leaves the unit, it flows through a high-capacity fine pollen filter (ePM_{1.0} 55 % (F7)). The operator receives a message when it is time to change the filter. In addition, an activated carbon filter can be installed on the supply air side as an option. The activated carbon filter can be inserted in place of the standard supply air filter. This is a high-capacity filter (ePM_{2.5} 50 %) with high efficiency against particles (pollen, fine dust, etc.) and against gaseous pollutants and odours (agriculture, traffic, etc.).

Air delivery

Two backward-curved centrifugal fans with EC direct current motors deliver the air. The rotating wheel made of high-tech composite material is produced in one piece with optimised fluid mechanics, and ensures quiet operation of the unit. The electronics built into the engine enable the air volumes to be finely regulated between 15 and 100 %. The fans are arranged in such a way that no extract air can find its way to the supply air.

Suitability for winter

Due to the built-in enthalpy recovery unit, no condensate is formed in the unit. No preheating (electronic air heater) is necessary for outdoor temperatures down to -20 °C. The air volume ratio between the supply air and extract air is not changed.

Summer operation

The energy recovery is automatically reduced to a minimum at high outdoor temperatures. This enables night cooling (free cooling) in the summer as well as when the seasons change. It is not necessary to arrange for a bypass via dampers and a drive. In addition, the CoolVent® option can recover cold in air-conditioned buildings. The hot outdoor air is cooled and dried with the air-conditioned extract air.

Installation

The HomeVent® comfort ventilation unit is characterised by a compact design. It is possible to access the unit from the front for servicing. No condensate forms in the unit. We recommend the corresponding mounting sets with vibration dampers.

Standard operator terminal BG02 E

The operator terminal consists of a plastic casing for on-wall mounting. The target air volume and the target air humidity can be set with two rotary knobs. With the party button, the air volume can be increased for a limited period of time. The connection to the HomeVent® comfort ventilation unit is made via RJ45 plug connection. The unit can also be installed in a secondary room.

TopTronic® E

room control module comfort plus

The TopTronic® E room control module comfort plus is available either with a black or white design. Operated by a colour touchscreen (4.3 inch). The connection to the HomeVent® comfort ventilation unit is made via RJ45 plug connection or plug terminals (max. 0.75 mm²). The unit can be installed on the wall with an on-wall mounted frame or with a wall-mounting plate and flush-mounted boxes. The unit can be installed in a secondary room.

Functional possibilities:

- Operation of all Hoval units connected to the bus.
- Authorisation management for operation.
- Efficient control of the ventilation system by working with day programmes
- Selection between different start screens possible during commissioning.
- Customer-specific configuration of the screen for displaying the following elements:
 - Date and time
 - Moon phases
 - Current air volume in %
 - Maximum target humidity in %
 - Active day or week programme
 - Display of current room air quality (optional VOC or CO₂ air quality sensor must be installed for this purpose)
 - Display of the current weather or weather forecast (only possible in combination with HovalConnect)

Air quality

Optionally, a VOC or CO₂ air quality sensor can be installed in the unit during commissioning. The VOC air quality sensor(s) continuously monitor(s) the air for volatile organic components and regulate the air volume that is supplied or extracted via the speed of the fans. This results in optimal air quality in the building with minimal energy input.

- VOC air quality sensor on the extract air side:
The extract air is continuously monitored for odours, tobacco smoke, cleansing agents, etc. If the concentration of the extract air exceeds a certain value, the air volume is increased correspondingly. The sensitivity can be chosen. On the TopTronic® E room control module comfort plus, the air quality is displayed by a bar, which will either be green (good air), orange (slightly contaminated air) or red (bad air).

Cooling

The fresh air can be precooled using the CoolVent® option. However, this requires an air-conditioning system to be present in order to provide the necessary cooling in the room. The enthalpy recovery system extracts heat and humidity from the warm outdoor air and feeds it to the cold extract air. The energy consumption of the air-conditioning system is thereby reduced. The efficiency for this process is 85 %. The CoolVent® function is activated during commissioning.

**Function HomeVent®
 comfort FRT (251-451)**

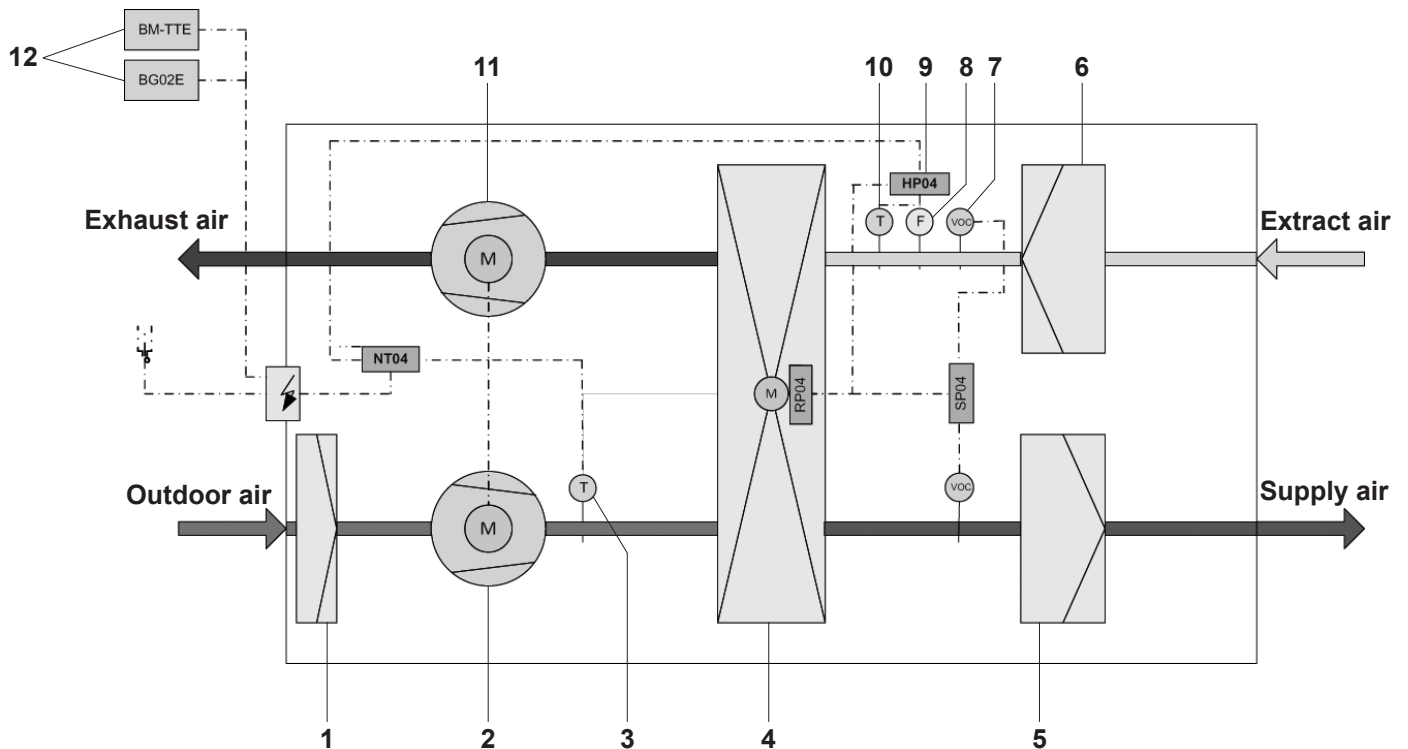

The outside air fan draws in outdoor air via the main line. In the first stage, this air is cleaned via a prefilter. In the enthalpy recovery system, the supply air is heated, depending on the temperature, and humidified. The extent to which heat and humidity are recovered is dependent on the temperature and humidity differences between the exhaust air and the outdoor air as well as on the rotor speed. Then the pre-treated outdoor air is cleaned by means of a pollen fine dust filter. The exhaust air fan sucks in the used air via the coarse dust filter.

The enthalpy recovery system extracts heat and humidity from the air and passes these to the supply air.
 The way the fans are positioned – with overpressure on the supply air side and underpressure on the extract air side – means that no extract air can find its way to the supply air.

The electronic controls and the operator terminal feature the following additional functions:

- The speed of the enthalpy recovery system is regulated by the outdoor temperature. In this way, the heat and humidity recovery is adjusted automatically.
- The humidity regulation changes the flow rate. Thus, if the humidity indoors is too high, for instance, more dry air is introduced from the outside.
- The functions of the unit are continuously monitored. In case of a malfunction, the device is switched to "fault" mode. The malfunction is displayed on the operator terminal.

Recommended accessories

VOC air quality sensor
for HomeVent® comfort FRT (251-451) and ER (200-400)
Can be installed on extract air side
Only in connection with the TopTronic® E room control module comfort plus.

Part No.

6058 206

CO₂ air quality sensor
for HomeVent® comfort FRT (251-451) and ER (200-400)
Can be installed on extract air side
Only in connection with the TopTronic® E room control module comfort plus.

6058 211

Notice

CO₂-sensor cannot be combined with VOC sensor

Cool recovery unit CoolVent®
for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Active-controlled cool recovery for air-conditioned buildings.
Activated by Hoval service technicians during commissioning.

6035 255

Unit base GS (251-451)
for HomeVent® comfort FRT (251-451)
Red painted steel, 4 vibration dampers, height-adjustable feet.
Height: 185-205 mm

6046 216

Vertical wall mounting set
for HomeVent® comfort FR (201-301), FRT (251-451) and ER (200-400)
Steel bracket red coated with vibration-damping support

6046 215

Acoustic insulating box FRT extract-supply air front
for HomeVent® comfort FRT (251-451)
Red housing made of aluzinc sheet with connection nozzles 4 x DN 160.
Extract air front left,
supply air front right
Exhaust air back left,
fresh air back right
All 4 air ducts are sound-insulated.
Dimensions (L x W x H):
400 x 560 x 560 mm

6046 018

Acoustic insulating box
FRT extract air-supply air right
for HomeVent® comfort FRT (251-451)
Red housing made of aluzinc sheet with connection nozzles 4 x DN 160.
Extract air front right,
supply air rear right
Exhaust air front left,
fresh air rear left
All 4 air ducts are sound-insulated.
Dimensions (L x W x H):
400 x 560 x 560 mm

6046 019

Acoustic insulating box FRT extract-supply air left
 for HomeVent® comfort FRT (251-451)
 Red housing made of aluzinc sheet with connection nozzles 4 x DN 160.
 Extract air rear left,
 supply air front left
 Exhaust air back right,
 fresh air front right
 All 4 air ducts are sound-insulated.
 Dimensions (L x W x H):
 400 x 560 x 560 mm

Part No.

6046 020

Distribution box VTB-180 18 x 75
 for HomeVent® comfort FRT (251)
 Housing made of aluzinc sheet with connection nozzles 2 x DN 180
 Connection nozzles 18 x DN 75
 Acoustic insulating unit supply and extract air side, access panel, incl. throttle orifices
 Dimensions (L x W x H):
 400 x 560 x 280 mm

6045 932

Filter HomeVent® comfort FRT (251-451)

Supply air filter FRT (251-451)
 for HomeVent® comfort FRT (251-451)
 Filter class ISO 16890: ePM_{1,0} 55 % (F7)

5043 550

Activated carbon filter FRT (251-451)
 for HomeVent® comfort FRT (251-451)
 Protection against pollutants and odours
 Alternative to supply air filter FRT (251-451)
 Filter class ISO 16890: ePM_{2,5} 50 %

5043 778

Extract air filter FRT (251-451)
 for HomeVent® comfort FRT (251-451),
 Filter class ISO 16890: ePM_{1,0} 60 % (G4)

Distribution cases DN 180

Distribution box VTB-180 18 x 75

for HomeVent® comfort FRT (251).
Casing made from aluzinc sheet with sound insulation element supply air and extract air side, access panel incl. throttle orifices.

Additional silencer recommended.

Connection nozzles:

2 x DN 180

SUP 9 x 75, EXT 9 x 75

Included accessories:

end covers and throttle orifices

Acoustic insulating box FRT

Red casing made of film-coated sheet steel.
 All 4 air ducts are sound-insulated.
 Connection nozzles:
 4 x DN 160

HomeVent® standard operator terminal BG02 E on-wall

Operator terminals BG02 E

Connection for RJ 45 plug
CAT5 patch (8-pin) connection cable
(parallel, not crossed)

Electrical connection

• Voltage (DC) 24 V

Type of protection IP 20

Application limits

3K3 as per EN 50090-2-2,
residential rooms, office

• Temperature range 15...40 °C

• Humidity range 5...85 % r.h.

TopTronic® E
Room control module comfort plus

- Colour touchscreen 4.3 inch
- Resolution: 480 x 320
- Connection to the Hoval bus system via RJ45 plug connection or plug terminals (max. 0.75 mm²)
- Voltage: 12 V DC 100 mA
- Humidity (in operation): 20...80 %, non-condensing

■ **Dimensions**

(Dimensions in mm)

1 Removable RJ45 plug connection
Alternative: plug terminal (max. 0.75 mm²)

Wall mounting with surface-mounting frame
(On-wall mounted frame is included in the scope of delivery)

Stainless steel cowl AAS-150
for spiral-seam tube DN 150,
galvanic isolation of the connection
for outside and exhaust air
of stainless steel, lamella cowl,
1 pipe DN 150, length = 0.5 m,
2 pipes DN 150, length = 1 m
and 2 wall mountings

6010 185

Stainless steel segment pipe bend CRB-150-90
for spiral-seam tube DN 150,
galvanic isolation of the connection
90° bend of stainless steel
DN 150

2040 722

Cold-shrink tape
for sealing air ducts,
heat and cold resistant
width: 50 mm,
roll: 15 m

2021 796

Ventilation silicone
for sealing air ducts,
heat and cold resistant
odourless

3000 009

Accessories DN 160

Exhaust air nozzle FST-160
 for spiral-seam tube DN 160
 of galvanised sheet steel
 with bird protection grille and
 double lip seal
 for horizontal installation

2070 412

Weatherproof grille WG-160
 for spiral-seam tube DN 160
 for outside and exhaust air
 of aluminium with rain lug, can be
 painted
 with double lip seal,
 pipe nozzle DN 160

2074 510

Sound absorber SD-160-500
 for spiral-seam tube DN 160
 rectangular casing
 of galvanised sheet steel,
 with double lip seal
 DN 160, dimensions: 290 x 215 mm,
 Length: 0.5 m

2074 514

Shut-off damper DTU-160
 for spiral-seam tube DN 160
 sealed shut-off damper
 for manual operation
 of galvanised steel sheet
 DN 160

2074 513

Pipe system DN 180

Spiral-seam tube WFR-180
of galvanised sheet steel
DN 180, length: 2 m

2057 030

Pipe bend BU-180-90
90° bend of galvanised sheet steel
with double lip seal
DN 180

2057 047

Pipe bend BU-180-45
45° bend of galvanised sheet steel
with double lip seal
DN 180

2057 048

T-piece TCPU-180-180-180
of galvanised sheet steel
with double lip seal
DN 180/DN 180/DN 180

2057 049

Sleeve MF-180
of galvanised sheet steel
DN 180

2057 051

Reduction/extension RCU-180-160
made of galvanised sheet steel
with double lip seal
DN 180 nipple/DN 160 nipple

2070 976

Reduction/extension RCFU-180-160
made of galvanised sheet steel
with double lip seal
DN 180 sleeve/DN 160 nipple

2070 975

Pipe system DN 180

Reduction/extension RCU-200-180
of galvanised sheet steel
with double lip seal
DN 200 nipple/DN 180 nipple

2057 053

Nipple NPU-180
of galvanised sheet steel
with double lip seal
DN 180

2057 064

Spigot ILX Ø 180 x 40 mm
with double lip seal

2070 895

End cover ED-180
of galvanised sheet steel
with double lip seal
DN 180

2057 065

Pipe clamp ROS-180
of galvanised sheet steel
2-section pipe clamp with insulation
insert, threaded rod 0.2 m and
ground plate.
DN 180

6034 767

Accessories DN 180

Weatherproof grille WG-180
for spiral-seam tube DN 180
for outside and exhaust air
of aluminium with rain lug, can be
painted, with double lip seal

2057 068

Fresh air suction set AAS-180
for spiral-seam tube DN 180
galvanic isolation of the connection
for outside and exhaust air
of stainless steel, lamella cowl,
1 tube DN 180, length: 0.5 m,
2 tubes DN 180, length: 1 m and
2 wall fastenings

6034 766

Stainless steel pipe bend CRB-180-90
for spiral-seam tube DN 180,
galvanic isolation of the connection
90° bend of stainless steel

2057 066

Exhaust air nozzle FST-180
for spiral-seam tube DN 180
of galvanised sheet steel
with bird protection grille
for horizontal installation

2057 069

**Silencer FSR-180-750
for spiral-seam tube DN 180**
rectangular casing made of galvanised
sheet steel,
with double lip seal, DN 180,
Dimensions: 480 x 250 mm, length: 0.75 m

2057 874

**Silencer FLSDA-180-1000
for spiral-seam tube DN 180**
Silencer outside manufactured from
flexible aluminium envelope tube,
inside from perforated aluminium tube,
with double lip seal, DN 180,
packing thickness 50 mm, length: 1 m

2057 875

Pipe system DN 200

Spiral-seam tube WFR-200
of galvanised sheet steel
DN 200, length: 2 m

2045 707

Pipe bend BU-200-90
90° bend of galvanised sheet steel
with double lip seal
DN 200

2040 734

Pipe bend BU-200-45
45° bend of galvanised sheet steel
with double lip seal
DN 200

Exhaust air nozzle FST-200
 for spiral-seam tube DN 200
 of galvanised sheet steel
 with bird protection grille
 for horizontal installation

2054 220

IsiPipe Plus Pipe system EPP DN 200

IsiPipe Plus pipeline EPP-200-1000
 Thermally insulated pipe
 Material: EPP, wall thickness 43 mm
 Inner Ø 200 mm, outer Ø 286 mm
 Length: 1000 mm incl. sleeve (60 mm)

Part No.

2065 111

IsiPipe Plus pipe bend EPP-200-45°
 Thermally insulated pipe bend 45°
 Material: EPP, wall thickness 43 mm
 Inner Ø 200 mm, outer Ø 286 mm

2065 113

IsiPipe Plus sleeve EPP-200
 Thermally insulated sleeve
 Material: EPP, wall thickness 43 mm
 length: 80 mm
 Inner Ø 200 mm, outer Ø 326 mm

2065 125

IsiPipe Plus ecc. adapter EPP-180-200
 Thermally insulated ecc. adapter
 Material: EPP, eccentric 48 mm,
 length: 250 mm
 Inner Ø 180 mm on IsiPipe Plus 200

2065 128

IsiPipe plus Pipe clamp ROS 160-200
 Semi-circular pipe clip from galvanized
 steel including cable tie.
 Hanger bolt 60 mm including anchor

2069 624

Flex pipe system DN 75

Flexible pipe 75
of polyethylene PE-HD
DN 75, inner Ø 62 mm, roller: 50 m
smooth inner/ribbed outer surface,
antistatic coating

Part No.

2072 166

Flexible pipe package 75
of polyethylene PE-HD
DN 75, inner Ø 62 mm,
6 rolls of 50 m, smooth inner/ribbed
outer surface, antistatic coating
Flexible pipe packages are excluded
from return.

6050 103

Sealing ring DI-75 black
for flexible pipe DN 75

2016 227

Stopper 75
For flexible pipe flex 75
Sealing plug

2072 168

Accessories DN 75

Order the sealing rings for the accessories separately. For quick and simple installation, all accessories are equipped with snap-on clip for attachment of the flexible pipe.

Double sleeve DM-75
for flexible pipe DN 75
for connecting flexible pipes DN 75

6022 896

Helmholtz silencer HSD-75
for flexible pipe DN 75
for acoustically sensitive rooms
attenuates low frequencies (500 Hz)
DN 75

6020 756

Accessories DN 75

Part No.

Order the sealing rings for the accessories separately. For quick and simple installation, all accessories are equipped with snap-on clip for attachment of the flexible pipe.

Formwork coupling SK-75
for flexible pipe DN 75 for extending a flexible pipe through the ceiling or the floor without damaging the boarding

6013 047

Formwork coupling SK-75/90
for flexible pipe DN 75 and 90 for extending a flexible pipe through the ceiling or the floor and extension from DN 75 to DN 90 without damaging the boarding.

6030 820

Pipe bend RB-75
for flexible pipe DN 75 for connecting flexible pipes at an angle of 90°

6022 967

Flexible pipe crossing FRK-75
for flexible pipe DN 75 for crossing two flexible pipes DN 75 with reduced construction height (100 mm). For one crossing 2 pieces are necessary.

6031 011

Cable tie: 4.8 x 302 mm
As additional protection of the snap clip of the accessories for flex pipe with increased load.
100 pcs./package
Colour: natural

2057 027

Cable tie: 7.6 x 370 mm
For attaching flex pipes to the reinforcement.
100 pcs./package
Colour: natural

2057 028

Cable tie: 9.0 x 610 mm
For attaching flex pipes to the reinforcement.
50 pcs./package
Colour: natural

2057 029

Flex pipe system DN 90

Flexible pipe 90
of polyethylene PE-HD
DN 90, inner Ø: 75 mm, roller: 50 m
smooth inner/ribbed outer surface,
antistatic coating

Part No.

2072 167

Flexible pipe package 90
of polyethylene PE-HD
DN 90, inner Ø: 75 mm,
4 rolls of 50 m, smooth inner/ribbed
outer surface, antistatic coating
Flexible pipe packages are excluded
from return.

6050 104

Sealing ring DI-90 black
for flexible pipe DN 90

5031 311

Stopper 90
For flexible pipe flex 90
Sealing plug

2072 169

Accessories DN 90

Order the sealing rings for the accessories separately. For quick and simple installation, all accessories are equipped with snap-on clip for attachment of the flexible pipe.

Pipe elbow RB-90/90°
for flexible pipe DN 90
for connecting flexible pipes
at an angle of 90°

6043 275

Double sleeve DM-90
for flexible pipe DN 90
for connecting flexible pipes

6022 494

Formwork coupling SK-90
for flexible pipe DN 90 for extending a
flexible pipe through the ceiling or the
floor without damaging the boarding

6022 495

Reduction/extension RCFU-90-75
for connecting flexible pipe DN 90 with
flexible pipe DN 75
of plastic

6022 514

Flexible pipe crossing FRK-90
for flexible pipe DN 90
for crossing two flexible pipes DN 90
with reduced construction height
(100 mm).
For one crossing 2 pieces are necessary.

6031 012

Cable ties can be found under
"Flexible pipe DN 75".

Flat channel system DN 100

Part No.

Flat channel 100
Flexible ventilation pipe 102 x 49 mm
Roll length 50 m

2071 003

Stopper flat channel 100
for flat channel 100
Sealing plug for building protection

2072 404

Stopper flat 100
for flat channel system 100 for sealing
unnecessary connections for outlet
round side 90° 125-2 x 100, outlet
round front 125-2 x 100 and
floor exhaust flat 2 x 100

2071 004

Seal flat 100
for flat channel 100

2071 005

Sleeve 100
for flat channel 100

2071 006

Arch horizontal flat 100
for flat channel 100

2071 007

Arch vertical flat 100
for flat channel 100

2071 008

Arch vertical flat to round 100-75
Transition 90° round to flat

2071 009

Outlet round, lateral 90° 125-2 x 100
for flat channel 100
incl. mounting bracket, 1 stopper 100
for poppet valve DN 125
supply air 40 m³/h
extract air 50 m³/h

2071 010

Outlet round, front 125-2 x 100
for flat channel 100
incl. mounting bracket, 1 stopper 100
for poppet valve DN 125
supply air 40 m³/h
extract air 50 m³/h

2071 011

Floor exhaust flat 2 x 100
for floor grille inox and white
309 x 86.5 mm interior
incl. 1 stopper 100
2 flat channel 100 connections

2071 012

Flat channel system DN 140

Flat channel 140
Flexible ventilation pipe 142 x 49 mm
Roll length 20 m

Stopper flat channel 140
for flat channel 140
Sealing plug for building protection

Stopper flat 140
for flat channel system 140

Seal flat 140
for flat channel 140

Sleeve 140
for flat channel 140

Arch horizontal flat 140
for flat channel 140

Arch vertical flat 140
for flat channel 140

Outlet round, lateral 90° 125-2 x 140
for flat channel 140
incl. mounting bracket, 1 stopper 140
for poppet valve DN 125
supply air 40 m³/h
extract air 50 m³/h

Floor exhaust flat 1 x 140
for floor grille inox and white
309 x 85 mm inside
1 connection flat channel 140

Adapter flat to round 140-90,
made of plastic

Sealing ring for flexible pipe DN 90
in connection with click ring 90, for
connection of flexible pipe FR-90
to adapter flat to round 140-90

Part No.

Click ring DN 90
for adapter flat to round 140-90
and flexible pipe FR-90

2071 000

Flat channel intersection 140-90
Consisting of:
1 metre flat channel 140
2 adapters flat to round 140-90
2 seals 140
2 click rings DN 90
2 seals 90

2071 002

System accessories

Floor grille Inox
for floor exhaust flat 2 x 100
and 1 x 140
Dimensions: 350 x 130 mm

2070 930

Floor grill, white
for floor exhaust flat 2 x 100
and 1 x 140
Dimensions: 350 x 130 mm

2070 931

Outlet round 90° lateral 125-2 x 75
made of plastic 2 x 75/125 mm
Usable length 325 mm
incl. 1 stopper 75

2070 997

Stopper 75
Sealing plug for sealing
unnecessary connections to
round outlet 90° side 125-2 x 75

2070 932

Sealing ring for flexible pipe DN 75
in connection with click ring 75, for
connection of flexible pipe FR-75
to outlet round 90° side 125-2 x 75
and bend
vertical flat to round 100-75

2070 994

Click ring DN 75
for outlet round 90° side 125-2 x 75
and vertical bend flat to round 100-75
Flexible pipe FR-75
Positive locking, detachable connection
between flexible pipe and
round connection

2070 996

Distribution cases DN 160

Part No.

Application
Preferably concrete installation
(mass concrete)

Distribution box VTB-160 9 x 75
 Air distribution box from aluzinc sheet with access panel (can be painted on site). Interior lined with sound insulation material.
 Connection nozzle:
 2 x DN 160 (downward)
 ZUL 9 x 75 resp. ABL 9 x 75
 Consisting of:
 Box, 6 connection brackets,
 4 resp. 2 end caps, orifices for setting the air quantity per flex pipe DN 75.

6054 083

Section distributor SV-6 x 75
 for flexible pipe DN 75
 for space-saving laying of 6 flexible pipes in the ceiling.
 Option of 6 x 90° bends or 3 straight connecting pieces. Each 90° elbow can be turned at 45° increments.
 6 x DN 75
 One section distributor required for each supply and exhaust air source.

6042 706

Section distributor SV-6 x 90
 for flexible pipes DN 90
 for space-saving laying of 6 flexible pipes in the ceiling.
 Option of 6 x 90° bends or 3 straight connecting pieces. Each 90° elbow can be turned at 45° increments. 6 x DN 90
 One section distributor required for each supply and exhaust air source

6044 775

Distribution cases DN 160

Part No.

Application
On-wall installation

Distribution case VK

Casing of aluzinc sheet with 1 connection nozzle Ø 160 mm (included separately), can be mounted on the front, at the top or laterally on the left or on the right (on site) and x connection nozzles for flexible pipe Ø 75 mm. PU sound absorption block inside with washable outer skin and an access panel. Incl. throttle orifices

Type	Connections
------	-------------

Mounting holder MH

for storey distributor GVT-X

from galvanised steel sheet

Length: 0.3 m

Two angle rails recommended per storey distributor.

5032 853

Distribution cases DN 160

Application
Preferably concrete installation
(mass concrete)

In-wall distribution case UPVK-160 75 x 6

Distribution case made of aluzinc sheet metal for cementing in. With a sliding connection piece DN 160 and 2 x 3 connections DN 75 (side), incl. 2 end covers, inner lining of sound insulating material, inspection sliding connection piece DN 180
 Incl. throttle orifices

6051 581

In-wall distribution case UPVK-160 75 x 10

Distribution case made of aluzinc sheet metal for cementing in. With a sliding connection piece DN 160 and 2 x 5 connections DN 75 (side), incl. 4 end covers, inner lining of sound insulating material, inspection sliding connection piece DN 180
 Incl. throttle orifices

6051 589

In-wall distribution case UPVKS-160 75 x 10

Distribution case made of aluzinc sheet metal for cementing in. With a connection nozzle DN 160 (end face) and 2 x 5 connections DN 75 (side) incl. 5 end covers, inner lining of sound insulating material, inspection sliding connection piece DN 180
 Incl. throttle orifices

6051 671

In-wall distribution case UPVKS-160 90 x 10

Distribution case made of aluzinc sheet metal for cementing in. With a connection nozzle DN 160 (end face) and 2 x 5 connections DN 90 (side) incl. 4 end covers, inner lining of sound insulating material, inspection sliding connection piece DN 180
 Incl. throttle orifices

6051 626

Part No.

Distribution cases DN 180

Application
On-wall installation

Distribution case VK

Casing of aluzinc sheet with 1 connection nozzle Ø 180 mm (supplied loose), on end, top or left-side mounting (on site) and x connection nozzles for flex pipes Ø 75 resp. 90 mm. PU sound absorption block inside with washable outer skin and an access panel.

Incl. throttle orifices

Air grilles - floor

Application
In the floor structure
(finished floor, only supply air)

Floor grille BD-30-75
 perforated grille made from stainless
 steel in an adjustable casing
 Inner component of stainless
 steel
 Outer component of aluzinc sheet with
 2 fastening catches and one connection
 nozzle for flexible pipe DN 75
 Supply air up to 30 m³/h
 Height: 130 to 180 mm

6015 304

Floor grille BD-30-90
 perforated grille made from stainless
 steel in an adjustable casing.
 Inner component of stainless
 steel,
 outer component of Al/Zn sheet with
 2 fastening catches and one connection
 nozzle for flexible pipe DN 90.
 Supply air up to 40 m³/h
 Height: 130 to 180 mm

6022 513

Air grilles - wall/ceiling

Part No.

Application
Mass concrete, masonry walls and lightweight walls

Connection housing AG-60
 for supply and extract air in combination with design grilles. Casing allows precise grille alignment (swivelling) after mounting.
 Plastic casing with 2 connection nozzles DN 75, fastening bracket, end cover, sound insulating mat and insert block as building protection cover and plastering aid.
 Supply air:
 1 x DN 75 up to 30 m³/h
 2 x DN 75 for 40 m³/h
 Exhaust air:
 1 x DN 75 up to 30 m³/h
 2 x DN 75 up to 60 m³/h
 For installation in solid concrete, masonry and plasterboard walls.

6034 355

Connection housing AG-90
 for supply and extract air in combination with design grilles. Casing allows precise grille alignment (swivelling) after mounting.
 Plastic casing with 2 connection nozzles DN 90, fastening bracket, end cover, sound insulating mat and insert block as building protection cover and plastering aid.
 Supply air:
 1 x DN 90 up to 40 m³/h
 Exhaust air:
 1 x DN 90 up to 60 m³/h
 For installation in solid concrete, masonry and plasterboard walls.

6034 357

Application
Mass concrete

Extension VAG-60/90
 for connection housing AG-60 and AG-90 for raising above the lower reinforcement for solid concrete ceilings.
 Raising height: 60 mm
 Extension permits precise grille alignment after installation.

6034 360

Extract air filter AGF-60/90
 for connection housing AG-60 and AG-90 of cleanable, fine-mesh polyamide net with plastic frame.
 Cannot be combined with sound insulation insert.

5033 121

Sound insulation insert 60/90
 for connection housing AG-60 and AG-90 retrofittable sound insulation insert for acoustically sensitive rooms.
 Cannot be combined with extract air filter AGF-60/90.

6034 398

Air grilles - wall/ceiling

Part No.

Application
Mass concrete, filigree blankets

Connection housing quick 75
for supply and extract air in combination with design grilles. Housing allows precise alignment of grilles after mounting. Plastic housing with 2 connection nozzles DN 75. Very easy to mount, no nails in concrete after stripping.
Supply air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 40 m³/h
Extract air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 60 m³/h
Suitable for installation in solid concrete

6046 302

Connection housing quick 90
for supply and extract air in combination with design grilles. Housing allows precise alignment of grilles after mounting. Plastic housing with 2 connection nozzles DN 90. Very easy to mount, no nails in concrete after stripping.
Supply air:
1 x DN 90 up to 40 m³/h
Extract air:
1 x DN 90 up to 60 m³/h
Suitable for installation in solid concrete

6046 296

Sound insulation insert quick
for connection housing quick retrofittable sound insulation insert for acoustically sensitive rooms. Not combinable with extract airfilter quick

6047 831

Extract air filter quick
for connection housing quick of cleanable, fine-mesh polyamide net with plastic frame. Cannot combine w/sound insulation insert

5045 011

Mounting set quick
Mounting help for connection housing quick with 4 mounting brackets and 8 screws

6048 808

Air grilles - wall/ceiling

Part No.

Plastic supply air/extract air grille

The alignment of the grilles can be slightly corrected after installation.

Design grille Pazifik

for connection housing AG-60, AG-90 and quick 75/90

made of plastic, with plug connection, white (RAL 9016) stove-enamelled,

Suited for:

supply air up to 40 m³/h

extract air up to 60 m³/h

6046 743

Design grille Adria

for connection housing AG-60, AG-90 and quick 75/90

made of plastic, with plug connection, white (RAL 9016) stove-enamelled,

Suited for:

supply air up to 40 m³/h

extract air up to 60 m³/h

6046 744

Design grille Atlantik

for connection housing AG-60, AG-90 and quick 75/90

made of plastic, with plug connection, white (RAL 9016) stove-enamelled,

Suited for:

supply air up to 40 m³/h

extract air up to 60 m³/h

6046 745

Design grille Karibik

for connection housing AG-60, AG-90 and quick 75/90

made of plastic, with plug connection, white (RAL 9016), painting on site,

Suitable for:

supply air up to 40 m³/h

extract air up to 60 m³/h

6047 228

Air grilles - wall/ceiling

Part No.

Metal supply air/extract air grille

The alignment of the grilles can be slightly corrected after installation.

Design grille Pizol
for connection housing AG-60, AG-90 and quick 75/90
of brushed stainless steel,
with plug connection,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 696

Design grille Pizol
for connection housing AG-60, AG-90 and quick 75/90
of sheet steel, with plug connection,
white (RAL 9016) stove-enamelled,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 698

Design grille Alvier
for connection housing AG-60, AG-90 and quick 75/90
of brushed stainless steel,
with plug connection,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 700

Design grille Alvier
for connection housing AG-60, AG-90 and quick 75/90
of sheet steel, with plug connection,
white (RAL 9016) stove-enamelled,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 702

Design grille Sântis
for connection housing AG-60, AG-90 and quick 75/90
of brushed stainless steel,
with plug connection,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 724

Design grille Sântis
for connection housing AG-60, AG-90 and quick 75/90
of sheet steel, with plug connection,
white (RAL 9016) stove-enamelled,
Suited for:
supply air up to 40 m³/h
extract air up to 60 m³/h

6046 726

Air grilles - wall/ceiling

Design grille Pilatus white

For connection housing
AG-60, AG-90, quick 75 and 90
Aluminium sheet with flanged edges
Painted white (RAL 9016)
With holding fixture
for connection housing
AG-60, AG-90, quick 75 and 90
- Supply air up to 40 m³/h
- Extract air up to 60 m³/h

6054 365

Design grille Pilatus Alu

For connection housing
AG-60, AG-90, quick 75 and 90
Aluminium sheet with flanged edges
Surface: anodized brushed aluminium
With holding fixture
for connection housing
AG-60, AG-90, quick 75 and 90
- Supply air up to 40 m³/h
- Extract air up to 60 m³/h

6054 366

Connection cylinder quick 75 short

for masonry, lightweight
and wood construction
Plastic casing, two connections DN 75
incl. 1 stopper DN 75
Supply air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 40 m³/h
With design grille Tangential 125
only 1 x DN 75
Extract air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 60 m³/h

6050 374

Connection cylinder quick 75 medium

for element ceiling up to 60 mm,
solid concrete
Plastic casing, two connections DN 75
incl. 1 stopper DN 75
Supply air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 40 m³/h
With design grille Tangential 125
only 1 x DN 75
Extract air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 60 m³/h

6050 375

Connection cylinder quick 90 short

for masonry, lightweight
and wood construction
Plastic casing, with connection DN 90
Supply air:
1 x DN 90 up to 40 m³/h
Extract air:
1 x DN 90 up to 60 m³/h

6050 377

Connection cylinder quick 90 medium

for element ceiling up to 60 mm,
solid concrete
Plastic casing, with connection DN 90
Supply air:
1 x DN 90 up to 40 m³/h
Extract air:
1 x DN 90 up to 60 m³/h

6050 378

Air grilles - wall/ceiling

Part No.

Design grille Tangential 125
 suitable for
 connection cylinders quick 75 and 90
 made of plastic, with plug-in connection
 Colour: white RAL 9016,
 can be painted on site
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

6052 158

Design grille Falknis painted white
 suitable for
 connection cylinders quick 75 and 90
 Steel, painted white (RAL 9016)
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

6052 162

Stainless steel design grille Falknis
 suitable for
 connection cylinders quick 75 and 90
 Brushed stainless steel
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

6051 847

Design grille Calanda painted white
 suitable for
 connection cylinders quick 75 and 90
 Steel, painted white (RAL 9016)
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

6052 161

Stainless steel design grille Calanda
 suitable for
 connection cylinders quick 75 and 90
 Brushed stainless steel
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

6051 849

Design grille Rigi white
 suitable for
 connection cylinder quick 75 and 90
 Aluminium sheet with flanged edges
 Painted white (RAL 9016)
 With holding fixture for
 connection cylinder quick 75 and 90
 - Supply air up to 40 m³/h
 - Extract air up to 60 m³/h

6054 363

Design grille Rigi aluminium
 suitable for
 connection cylinder quick 75 and 90
 Aluminium sheet with flanged edges
 Surface: anodized brushed aluminium
 With holding fixture for
 connection cylinder quick 75 and 90
 - Supply air up to 40 m³/h
 - Extract air up to 60 m³/h

6054 364

Air grilles - wall/ceiling

Extract air filter 125
for connection cylinder quick 75 and 90
of cleanable, fine-mesh polyamide net
with plastic frame.

5049 629

Disc valve supply air TVZ-125
for connection cylinder quick 75 and 90
of sheet steel (white RAL 9016)
with installation frame DN 125,
height: 45 mm
supply air up to 40 m³/h

2056 417

Disc valve extract air TVA-125
for connection cylinder quick 75 and 90
of sheet steel (white RAL 9016)
with installation frame DN 125,
height: 45 mm
extract air up to 60 m³/h

2056 416

Grilles - supply air/extract air

Application
Concrete installation (in-situ concrete)

Connection box SD-75
for encasing in concrete, made of
galvanised sheet steel
with 1 nozzle 75 mm
Air quantity up to 30 m³/h

6022 617

Connection box SD-90
for encasing in concrete, made of
galvanised sheet steel
with 1 nozzle 90 mm
Air quantity up to 40 m³/h

6022 543

Design slit grille 500 mm
matching connection box SD-75 and SD-90
Colour: anodized aluminium
Supply air: up to 40 m³/h

2037 000

Pipe system DN 160

The pipe system consists of galvanised steel with double lip seal.
Pipe as per DIN 24145; 0.6 mm thick.

Flow rate [m³/h]	[Pa/m] Pipe	Pressure drop [Pa] 90° elbow	[Pa] 45° elbow
150	0.5	1.3	0.8
200	0.8	2.0	1.2
250	1.2	2.5	1.5
350	1.8	5.0	1.8

Pipe system DN 180

The pipe system consists of galvanised steel with double lip seal.
Pipe as per DIN 24145; 0.6 mm thick.

Flow rate [m³/h]	[Pa/m] Pipe	Pressure drop [Pa] 90° elbow	[Pa] 45° elbow
150	0.4	0.8	0.5
250	0.6	2.0	1.0
350	1.0	4.0	2.0

Pipe system DN 200

The pipe system consists of galvanised steel with double lip seal.
Pipe as per DIN 24145; 0.6 mm thick.

Flow rate [m³/h]	[Pa/m] Pipe	Pressure drop [Pa] 90° elbow	[Pa] 45° elbow
150	0.3	0.7	0.5
350	0.7	1.6	1.0
500	1.5	4.0	2.0

Thermal insulation for main duct DN 160

The insulation consists of synthetic rubber (closed-cell EPDM with resistant outside skin), insulation thickness 25 mm, black.
Thermal conductance λ at 0 °C is 0.032 W/mK
Steam diffusion resistance ≥ 7000
Fire class 5.3 or B1

Thermal insulation tube: for spiral-seam tube DN 160 mm, case contains 3 tubes, each with a length of 2 m

Adhesive: ready-to-use adhesive with brush 0.25 l

Thermal insulation for pipe elbow: Thermal insulation mat cut to length for pipe elbow (2-part) suitable for DN 160

Adhesive tape: of synthetic rubber, 50 mm wide, 15-meter roll

Pipe clamp with thermal insulation sleeve: For installation of pipes without thermal bridges

Attention: Comply with regional regulations on thermal insulation.

IsiPipe Plus pipe system EPP

Pipeline consists of diffusion-tight EPP

Wall thickness: 43 mm, black

Thermal conductance: $\lambda = 0.035 \text{ W/mK}$

IsiPipe Plus pipe system EPP-160

(Dimensions in mm)

IsiPipe Plus pipeline EPP-160/1000

IsiPipe Plus sleeve EPP-160

IsiPipe Plus pipe bend EPP-160

IsiPipe Plus eccentric adapter EPP-160-160

2x IsiPipe Plus pipe bend EPP-160/45

for wall outlet, Ø 160

Weatherproof grille WG-160

for spiral-seam tube DN 160
for outside and exhaust air
of aluminium with rain lug,
can be painted with double lip seal,
pipe nozzle DN 160

Flow rate [m³/h]	Pressure drop Outside air [Pa]	Pressure drop Exhaust air [Pa]
150	7	7
200	12	15
250	18	24

Silencer SD-160-500

The silencer consists of a rectangular casing of galvanised steel with connection nozzles on both sides. The housing is lined on the inside with highly effective sound absorbing material. The unit can be cleaned through the pipe nozzle. When used in fresh air and exhaust air, the silencers must be thermally insulated on site.

Frequency [Hz]	125	250	500	1000	2000	4000	8000
Simple damping [dB]	6	10	19	23	32	25	16

Weatherproof grille WG-180

for spiral-seam tube DN 180 for outside and exhaust air of aluminium with rain lug, can be painted with double lip seal, pipe nozzle DN 180

Flow rate [m³/h]	Pressure drop [Pa]
150	6
250	9
350	13

Silencer FSR-180-750

The silencer consists of a rectangular casing of galvanised steel with connection nozzles on both sides. The housing is lined on the inside with highly effective sound absorbing material. The unit can be cleaned through the pipe nozzle. When used in fresh air and exhaust air, the silencers must be thermally insulated on site.

Frequency [Hz]	125	250	500	1000	2000	4000	8000
Simple damping [dB]	4	11	12	12	12	7	3

Silencer FLSDA-180-1000

The silencer consists of a flexible aluminium envelope tube, inside from perforated aluminium tube with connection nozzles on both sides with double lip seal.

Frequency [Hz]	125	250	500	1000	2000	4000	8000
Simple damping [dB]	5	13	30	42	34	24	13

Stainless steel cowl AAS-180

for spiral-seam tube DN 180
galvanic isolation of the connection for outside and exhaust air of stainless steel, lamella cowl, consisting of:
1 cowl DN 180,
1 pipe DN 180, length: 0.5 m,
2 pipes DN 180, length: 1 m and
2 wall mountings

Weatherproof grille WG-200
 for spiral-seam tube DN 200
 for outside and exhaust air
 of aluminium with rain lug,
 can be painted with double lip seal,
 pipe nozzle DN 200

Flow rate [m³/h]	Pressure drop [Pa]
150	4
350	8
500	12

Silencer SD-200-1000

The silencer consists of a round casing of galvanised steel with connection nozzles on both sides. The housing is lined on the inside with highly effective sound absorbing material.

The unit can be cleaned through the pipe nozzle.

Frequency [Hz]	125	250	500	1000	2000	4000	8000
Damping [dB]	5	15	26	26	19	10	5

Stainless steel cowl AAS-200

for spiral-seam tube DN 200

galvanic isolation of the connection for outside and exhaust air of stainless steel, lamella cowl, consisting of:

- 1 cowl DN 200,
- 1 pipe DN 200, length: 0.5 m,
- 2 pipes DN 200, length: 1 m and
- 2 wall mountings

Pipe system distribution duct DN 75 and DN 90

The distribution duct is a flexible pipe of polyethylene PE-HD with a smooth inside wall, ribbed on the outside.

Antistatic coating

Weight 0.33 kg/m

Application limit: Air and ambient temperature

-25...60 °C

Formwork coupling SK-75/90

for flexible pipe DN 75 and 90 for extending a flexible pipe through the ceiling or the floor and extension from DN 75 to DN 90 without damaging the boarding.

Section distributor SV-6 x 75

For quick, space-saving installation of flexible pipes FR-75 in ceilings/floors and walls. Each 90° connection can be rotated in increments of 45°.

After completion of the building shell, the lower distributor plate is fitted and the flexible pipes FR-75 are simply connected up. The inside of the 90° nozzles is rounded to allow easy cleaning of the ducts.

Section distributor SV-6 x 90

For quick, space-saving installation of flexible pipes FR-75 in ceilings/floors and walls. Each 90° connection can be rotated in increments of 45°.

After completion of the building shell, the lower distributor plate is fitted and the flexible pipes FR-75 are simply connected up. The inside of the 90° nozzles is rounded to allow easy cleaning of the ducts.

Flexible pipe crossing FRK-75

for flexible pipe DN 75
for crossing two flexible pipes DN 75
with reduced construction height (100 mm).
For one crossing 2 pieces are necessary.

Flexible pipe crossing FRK-90

for flexible pipe DN 90
for crossing two flexible pipes DN 90
with reduced construction height (100 mm).
For one crossing 2 pieces are necessary.

Floor grille 100, 140

inox or white colour
for flat channel system 100 and 140
Dimensions: 350 x 130 mm

Stopper flat 75

sealing plug for outlet 90°
lateral 125-2 x 75

Click ring 75

for outlet 90° lateral 125-2 x 75

Click ring 90

for outlet 90° lateral 125-2 x 90

Outlet flat 90 125-75

Outlet round 90° lateral 125-2 x 75
made of plastic 2 x 75/125 mm
Usable length 325 mm

Flat channel 100

Flexible ventilation pipe 102 x 49 mm
Roll length 50 m
minimum bending radius 200 mm

Plug flat channel 100

Stopper flat 100

for flat channel system 100 connections

Seal flat 100

 for flat channel 140
 incl. mounting bracket

Floor exhaust flat 1 x 140
 309 x 85 mm interior
 1 flat channel 140 connection

Distribution cases DN 160

Distribution box VTB-160 14 x 75

Air distribution box of aluzinc sheet without access panel.

Connection nozzles:

2 x DN 160 supply and extract air

supply air 7 x DN 75 (4 x front and 3 x side)

extract air 7 x DN 75 (4 x front and 3 x side)

Distribution cases DN 160

Distribution case for 6, 8 or 10 connections VK-160-75

This distribution case with an integrated silencer is used if the pipes can be arranged and laid centrally. Orifices for setting the air quantity per flexible pipe DN 75 (included in the scope of delivery).

In type VK, the DN 75 connections are on the end; the connection nozzle DN 160 is supplied and can be installed on the end, top or on the left or right side. The distribution case is suitable for on-wall installation.

Type	A	B	n
VK-160-75 x 6	305	355	6
VK-160-75 x 8	400	450	8
VK-160-75 x 10	495	545	10

Distribution box VTB-160 9 x 75

for concrete installation
Distribution box of aluzinc sheet with access panel (can be painted on site). Lined on the inside with sound absorbing material.

Connection nozzle:
2 x DN 160 (downward)
Supply air 9 x DN 75
(5 x side / 2 x front and rear each)
Extract air 9 x DN 75
(5 x side / 2 x front and rear each)
Consisting of: box, 6 connection brackets,
4 end caps, incl. throttle orifices.

Distribution cases DN 160

Storey distributor GVT-3

Storey distributor GVT-3 ... GVT-6

Storey distributor with 4 connection options for the main duct, incl. 2 connection nozzles DN 160, incl. 3 sealing caps DN 160. Flexible installation and easy cleaning of the pipes via the access panels on both sides. Orifices for setting the air quantity per flexible pipe DN 75 or DN 90 (included in the scope of delivery). Resonators for sound insulation. Material: Galvanised steel
 Inside lining: Sound absorbing mat

The mounting holder MH for floor distributor GVT-3 ... GVT-6 must be ordered separately.

Storey distributor GVT-4

Storey distributor GVT-5

Storey distributor GVT-6

Distribution cases DN 160

UPVK 6 x 75

In-wall distribution case 6 x 75

for concrete installation

Distribution case of aluzinc sheet. With one connection nozzle DN 160 (upwards and downwards) and 2 x 3 nozzles DN 75 (lateral), incl. 2 end covers, 1 spigot DN 160, inside lining of sound insulation material, orifices for setting the air quantity per flexible pipe.

UPVK 10 x 75

In-wall distribution case 10 x 75

for concrete installation

Distribution case of aluzinc sheet for encasing in concrete. With one connection nozzle DN 160 (upwards and downwards) and 2 x 5 nozzles DN 75 (lateral), incl. 4 end covers, 1 spigot DN 160, inside lining of sound insulation material. Orifices for setting the air quantity per flexible pipe.

Distribution cases DN 160

In-wall distribution case UPVKS 10 x 75

In-wall distribution case UPVKS 10 x DN X
for concrete installation

Distribution case made from aluzinc sheet.
With one connection nozzle DN 160 (on face)
and 2 x 5 nozzles DN 75 and DN 90 (lateral),
incl. 4 end covers, inside lining of sound insu-
lation material, incl. throttle orifices.

In-wall distribution case UPVKS 10 x 90

Distribution cases DN 180

Distribution case VK-180-75

Dimensions distribution case VK-180-75x..

type	A	B	n
VK-180-75 x 8	460	508	8
VK-180-75 x 10	570	618	10
VK-180-75 x 12	680	728	12

Distribution case for 8, 10 or 12 connections VK-180-75 resp. VK-180-90

This distribution case with an integrated silencer is used if the pipes can be arranged and laid centrally.

Incl. throttle orifices

In type VK, the DN 75 resp. DN 90 connections are on the end; the connection nozzle DN 180 is supplied and can be installed on the end, top or on the left or right side. The distribution case is suitable for on-wall installation.

Distribution case VK-180-90

Dimensions distribution case VK-180-90x..

type	A	B	n
VK-180-90 x 8	460	508	8
VK-180-90 x 10	570	618	10
VK-180-90 x 12	680	728	12

Distribution cases DN 200

In-wall distribution cases UPVK 200-90x12
 for concrete installation
 Distribution case made from aluzinc sheet.
 Lined on the inside with
 sound absorbing material.
 Connection nozzles:
 2 x DN 200, 2 x 6 DN 90 (sideways).
 Incl. end covers, 1 connection nozzle DN 200,
 incl. throttle orifices

Distribution case VK200-75x15
 Distribution case of aluzinc sheet
 with access panel.
 Inside with sound absorption block.
 Connection nozzles:
 1 x DN 200 (on the back)
 15 x DN 75 (on the front)
 Incl. throttle orifices

Floor grille BD-30-75

For installation in the floor structure, supply air flow rate 30 m³/h. Perforated stainless steel grille in an adjustable casing, height 130-180 mm, inner component of stainless steel with 3 contact points, outer component of aluzinc sheet with 2 fastening catches and one connection nozzle for flexible pipe FR-75. Only suitable for supply air.

Floor grille BD-30-90

For installation in the floor structure, supply air flow rate 40 m³/h. Perforated stainless steel grille in an adjustable casing, height 130-180 mm, inner component of stainless steel with 3 contact points, outer component of aluzinc sheet with 2 fastening catches and one connection nozzle for flexible pipe FR-90. Only suitable for supply air.

Connection housing AG-60

In combination with the design grilles.
 The extension allows fine adjustment of the grille (rotating) after installation.
 Suitable for installation in mass concrete, masonry walls or lightweight construction.
 Of plastic with 2 connection nozzles DN 75.
 Incl. fixing angles, sound absorbing mat and insert block as building protection cover and plastering aid.

Connection housing AG-90

In combination with the design grilles.
 The housing allows fine adjustment of the grille (rotating) after installation.
 Suitable for installation in mass concrete, masonry walls or lightweight construction.
 Of plastic with 2 connection nozzles DN 90.
 Incl. fixing angles, sound insulation mat and insert block as building protection cover and plastering aid.

Extension VAG-60/VAG-90

For installation of AG-60 and AG-90 on the formwork panel. Extension permits precise grille alignment after installation.

Connection housing quick 75

for supply and extract air in combination with the design grilles. The housing allows fine adjustment of the grilles after installation. Plastic housing with 2 connection nozzles DN 75. Very easy to mount, no nails in concrete after stripping.

Supply air:

1 x DN 75 up to 30 m³/h

2 x DN 75 up to 40 m³/h

Extract air:

1 x DN 75 up to 30 m³/h

2 x DN 75 up to 60 m³/h

Connection housing quick 90

for supply and extract air in combination with the design grilles. The housing allows fine adjustment of the grilles after installation. Plastic housing with 2 connection nozzles DN 90. Very easy to mount, no nails in concrete after stripping.

Supply air:

1 x DN 90 up to 40 m³/h

Extract air:

1 x DN 90 up to 60 m³/h

Suitable for installation in mass concrete

Design grille made of plastic

The grille is mounted on the connection housing AG-60 or the connection housing quick 75/90. There are four grille designs (Pazifik, Adria, Atlantik, Karibik). The outside dimensions are identical for all grilles. The wall/ceiling plaster must not exceed 30 mm.

Design grille made of metal

The grille is mounted on the connection housing AG-60 or the connection housing quick 75/90. There are three grille designs (Alvier, Sântis, Pizol, Pilatus). The outside dimensions are identical for all grilles. The wall/ceiling plaster must not exceed 30 mm.

Connection cylinder quick 75 short

For masonry, lightweight and wood construction
Plastic casing, two connections DN 75 incl. 1 stopper DN 75

Supply air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 40 m³/h
With tangential outlet only 1 x DN 75

Extract air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 60 m³/h

Connection cylinder quick 75 medium

For element ceiling 60 mm, solid concrete
Plastic casing, two connections DN 75 incl. 1 stopper DN 75 and building protection cover

Supply air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 40 m³/h
With tangential outlet only 1 x DN 75

Extract air:
1 x DN 75 up to 30 m³/h
2 x DN 75 up to 60 m³/h

Connection cylinder quick 90 short
for masonry, lightweight
and wood construction
Plastic casing, with connection DN 90

Supply air:
1 x DN 90 up to 40 m³/h

Extract air:
1 x DN 90 up to 60 m³/h

Connection cylinder quick 90 medium
for element ceiling up to 60 mm,
solid concrete
Plastic casing, with connection DN 90
incl. building protection cover

Supply air:
1 x DN 90 up to 40 m³/h

Extract air:
1 x DN 90 up to 60 m³/h

Design grille Tangential 125

suitable for:
 Connection cylinder quick 75 and 90
 made of plastic, with plug-in connection
 Colour: white RAL 9016, can be painted on site
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

Stainless steel design grille Falknis

suitable for:
 Connection cylinder quick 75 and 90
 Brushed stainless steel
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

Design grille Falknis painted white

suitable for:
 Connection cylinder quick 75 and 90
 Steel, painted white (RAL 9016)
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

Stainless steel design grille Calanda

suitable for:
 Connection cylinder quick 75 and 90
 Brushed stainless steel
 With support for
 connection cylinder quick 75 and 90
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

Design grille Calanda painted white

suitable for:
 Connection cylinder quick 75 and 90
 Steel, painted white (RAL 9016)
 With plug-in connection
 Supply air up to 40 m³/h
 Extract air up to 50 m³/h

Design grille Rigi aluminium

Suitable for connection cylinder quick 75 and 90
 Aluminium sheet with flanged edges
 Surface: anodized brushed aluminium
 With holding fixture for connection cylinder quick 75 and 90
 Supply air up to 40 m³/h
 Extract air up to 60 m³/h

Design grille Rigi white

Suitable for connection cylinder quick 75 and 90
 Aluminium sheet with flanged edges
 Painted white (RAL 9016)
 With holding fixture for connection cylinder quick 75 and 90
 Supply air up to 40 m³/h
 Extract air up to 60 m³/h

Slit grille SD-75

Slit grille SD-75 and SD-90

The slit grille is used for linear supply air distribution. It can be set to one or two outlet sides when taken into service, as required (preset to two sides).

The flow rate is set in the distribution case.

Slit grille SD-90

Relevant standards and regulations (incomplete)

- DIN 1946-T6: Controlled mechanical supply and extract air handling for apartments with heat recovery
- DIN 4109: Sound insulation in structural engineering
- DIN EN 779: 2012 Particulate air filters for general ventilation – determination of the filtration performance
- DIN 18017-T3: Ventilation of bathrooms and WCs without outside windows
- Energy Conservation Ordinance EnEV
- Ventilation System Guideline LÜAR

General

The following information is required for planning the comfort ventilation:

- Type, number, surface area and utilisation of the rooms included in the ventilation
- Floor plans and clear room heights
- Possible locations for routing distribution lines and outlets (ceiling, floor structure, outside wall, etc.)

One comfort ventilation device is only allowed to be used for one utilisation unit. The application limits must be complied with.

Fire protection requirements must be clarified with the responsible specialist. Normally (model building code), there are no special fire protection requirements within usage units with max. 2 dwelling units comprising in total less than 400 m² surface area and less than 7 m height. Living area ventilation units do not replace the drying out of the building. This should be completed by the time the living area ventilation is taken into operation.

Terms

Depending on the use to which they are put, rooms are divided into supply air, overflow and extract air areas (table 1). Rooms are only equipped with both supply and extract air ports in exceptional cases. Rooms equipped with comfort ventilation must be located within the thermal (insulated) building shell.

Table 1

Zone	Room use (examples)
Supply air zone	Bedroom, living room, nursery, dining room
Overflow zone	Corridor, hallway, stairway
Extract air zone	Bathroom, toilet, storage room, kitchen, hall

Flow rates

Necessary flow rates must be defined for a specific project on the basis of the current status of the relevant standards. Special requirements, e.g. concerning noise, moisture loads and temperatures must be taken into account. The following design recommendations are based on DIN 1946 part 6, although compliance with this standard must be examined on a case-by-case basis.

The largest of the flow rates described in the following 4 points is used as the basis for the nominal ventilation of the ventilation unit (e.g. total of all extract air flow rates).

The maximum air flow rate of the ventilation unit should be sufficient for intensive ventilation (1.3 x nominal ventilation at 170 Pa, for example).

1. A flow rate of 30 m³/h must be provided per person for the residential unit.
2. The area-related minimum flow rates in Table 2 must be complied with.
3. The flow rates in Table 3 must be guaranteed for extract air rooms.
4. The flow rates in Table 4 are recommended for supply air rooms.

Table 2

Relevant surface A _{NE} [m ²]	20	30	50	70	90	110	130	150	170	190	210
Nominal ventilation V _{R,NL} [m ³ /h]	35	45	65	80	100	115	125	140	150	155	165

Table 3: extract air

Room type	Extract air [m ³ /h]	n *
Kitchen, kitchenette	40	2
Bathroom, toilet with shower	40	2
Toilet	20	1
Utility room, hobby room	20	1

* n = usual number of flexible pipes

Table 4: supply air

Room type	Extract air [m ³ /h]	n *
Living room	40-50	2
Master bedroom (2 persons)	40	2
Nursery (1 person)	24	1
Office (private), dining room, guestroom	20	1

* n = usual number of flexible pipes

Supply/extract air

Only directly or indirectly heated rooms are included in the ventilation. All supply and extract lines should be routed within the insulated building envelope.

The position of the supply air, overflow air and extract air openings must be selected such that cross-ventilation occurs. Supply air openings must be positioned outside the occupied area, and in particular not above the head ends of beds, writing desks or couches.

Hoval normally uses round flexible pipes DN 75 or flat channels 100 as distribution lines. For noise and efficiency reasons, they should be 6 and 15 m long. The external pressure drops (outside + supply air or extract + exhaust air incl. distributor and silencer) should not be more than approx. 100 Pa for nominal ventilation. Hoval recommends complying with a maximum pressure drop of 40 Pa for the lines after the distributor (room-side). Flow rates in excess of 27 m³/h rated ventilation must therefore be distributed between 2 lines. In long line runs, it is necessary to carry out a corresponding calculation.

Distributors must be accessible for inserting the throttle orifices and for cleaning. Lines between the ventilation unit and the supply air distributor or extract air manifold are normally routed with the diameter of the unit coupling. In cool rooms, they must be insulated.

Fresh/exhaust air

The fresh air inlet should be planned in such a way as to avoid the intake of pollutants and smells. It should be at least 2 m above ground and not close to garages or roads with heavy traffic.

The exhaust air outlet should be positioned in such a way that it cannot be drawn in by the outside air inlet. The horizontal distance should be at least 2 m (note the predominant wind direction).

The fresh and exhaust air lines must be insulated over their complete surface and be impervious to vapour diffusion so as to avoid condensation forming on surfaces (e.g. 25 mm EPDM). The insulation must be continued through the outer wall at least until shortly below the outside surface.

Silencers

Silencers suitable for the noise emissions of the ventilation units must always be positioned in the supply and extract air lines. To avoid disturbance of neighbours or on your own patio, for example, it is recommended that silencers should be installed in the exhaust air and possibly also outside air lines.

Unit installation

The FR comfort ventilation units can be mounted in various different installation positions. (mounting on a wall/ceiling/floor, outside air top/bottom). The access panel is present on both sides for installation in opposite direction. The FRT comfort ventilation units are always installed with the nozzles directed upwards. Vibration dampers (accessories) must be used for mounting in order to avoid noise transmission and to prevent distortion of the unit. The entire comfort ventilation unit as well as its integrated and add-on parts must be accessible for maintenance and servicing work.

The installation conditions in the technical data (temperature, humidity) must be complied with.

Operator terminal/wiring

The comfort air ventilation unit is configured ready-to-connect. For connection with the mains supply a 3 m long cable with plug is supplied. A 230 V mains socket should be provided close to the comfort ventilation unit in the electrical planning. The operator terminal should be installed so that it is visible (fault display, operation).

The comfort ventilation unit and operator terminal are connected by an 8-pol CAT 5 patch ribbon cable. A socket (RJ45) must be installed in the building close to the comfort ventilation unit and connected to the position of the operator terminal (RJ45 plug). The HomeVent® comfort ventilation unit is supplied with a 3 m long cable with an RJ45 plug for connecting the unit to the socket.

Combination with heating sources

When using ventilation systems together with heating sources, the chimney sweep must be consulted in advance.

Systems extracting air (e.g. cooker hood, ventilation system, central vacuum cleaner, extract air dryer) can give rise to negative pressures and cause hazardous flue gases to be drawn out of the heat source; as a result, a pressure monitor with design certification is generally required as a safety device. This interrupts the electrical power supply to the air extraction system if dangerous pressure conditions arise. The use of approved fire sources independent from the room air can prevent the flue gas being sucked out.

Services

Hoval will be happy to assist you in planning and taking the systems into operation.

IsiPipe and IsiPipe Plus air ducts made of EPP

- The IsiPipe EPP air ducts are joined via a connecting sleeve.
- To ensure tight sealing, the individual sections must be inserted into the sleeve as far as the stop. Tight sealing must be ensured even when individual sections expand or contract as a result of temperature fluctuations.
- The individual sections can be shortened (e.g. using a knife or a saw). When shortening sections, always cut at right angles and remove any residue from the pipe. Use an assembly device, e.g. pipe clamp.
- IsiPipe air ducts made of EPP must be accessible (must not be routed in the cable duct).
- IsiPipe air ducts made of EPP must be supported at regular intervals (approx. every 1.5 m) with pipe clamps.
- When installing accessory parts with a high dead weight, the weight must be supported so that there is no load on the IsiPipe air duct.
- Thermal bridges must be prevented at the junctions between IsiPipe air ducts and pipes or components made of another material, e.g. metal.
