Hoval Indoor Climate Systems

Efficient. Flexible. Reliable.

A

Efficient. Flexible. Reliable.

Hoval indoor climate systems are decentralised systems for heating, cooling and ventilating halls for industrial, commercial and leisure applications. The systems have a modular structure. One system comprises several ventilation units which are spread around the room. These units are equipped with reversible heat pumps and gas-fired appliances for decentralised heat and cold generation, or they heat and cool with a connection to a central energy supply. Tailored control systems complete the system and ensure the effective combination and optimal use of all resources.

Diverse range of units ensures flexibility

Different types of ventilation units can be combined to create the perfect system for the project in question:

- RoofVent® supply and extract air handling units
- TopVent® supply air units
- TopVent® recirculation units

The number of supply and extract air handling units depends on how much fresh air is required in order to create a comfortable atmosphere for people in the building. Recirculation units cover additional heat or cool demand as required. A broad range of unit types and sizes with heating and cooling coils in various output levels means that the overall output of the system can be scaled to whatever level is required.

Specially designed unit versions are also available for halls with particularly humid or oily extract air.

Furthermore, there is a range of units available which have been expressly developed for very specific purposes. ProcessVent units, for example, are coupled with extract air purification systems in industrial halls and recover heat from process air.

Draught-free air distribution

A key feature of Hoval indoor climate units is the patented vortex air distributor, known as the Air-Injector. It is controlled automatically and changes the blowing angle of the air continuously between vertical and horizontal. The highly efficient air supply system has many advantages:

- It provides a high level of comfort during heating and cooling. No draughts develop in the hall.
- The efficient and even air distribution ensures that the indoor climate units cover a large area.
- The Air-Injector keeps the temperature stratification in the room low, thus minimising heat loss through the roof.

Control with specialist expertise

The TopTronic® C control system, which was specifically developed for Hoval indoor climate systems, regulates the separate units individually and controls them based on zones. This enables optimal adjustment to the local requirements of the different usage areas in the building. The patented control algorithm optimises energy use and ensures maximum comfort and hygiene levels. Clear interfaces make it easy to connect the system to the building management system.

Simpler control systems are also available for units that are only used for supply air or air recirculation.

Competent and reliable

Hoval will support you and provide expert knowledge throughout all project phases. You can rely on comprehensive technical advice when it comes to planning Hoval indoor climate systems and on the skills of the Hoval technicians during the installation, commissioning and maintenance of the system.

1 Use

1.1 Intended use

TopVent® TH units are recirculation units for heating spaces up to 25 m in height with central heat supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration (option)

The TopVent® TH unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® TH unit consists of the following components:

- Fan unit:
Axial fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating section:
Contains the heating coil for heating the supply air with hot water
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.

As part of the TopTronic® C control system, the unit control box is an integral component.

2.3 Operating modes

The TopVent® TH has the following operating modes:

- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® TH unit can operate individually in a local operating mode:
Off, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|-------|---|--|---|
| REC | Recirculation On/off-operation: If heating is required, the unit draws in room air, heats it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Heating on ¹⁾ ¹⁾ Depending on heat demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Heating off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Heating on ¹⁾ ¹⁾ Depending on heat demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Heating off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Heating on |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Heating off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating is activated by connecting the unit to a power supply (only if there is no bus connection to the zone controller). For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 Heating on |

4 Specification texts

4.1 TopVent® TH

Recirculation unit for heating rooms up to 25 m in height with central heat supply; equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating section
- Air-Injector or outlet nozzle
- Unit control box or terminal box
- Optional components

The TopVent® TH unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of maintenance-free, direct-drive axial fan with high-efficiency EC motor and balanced rotating wheel with aerodynamically shaped blades and serrated trailing edge (integrated in the heating section).

Heating section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials.

The heating section contains:

- The highly efficient heating coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water supply

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Outlet nozzle (variant)

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials. Concentric outlet nozzle with a supply air sensor.

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Plastic casing, protection rating IP 56. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating valve
 - Heating pump
 - Return temperature sensor
 - Door contact

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Terminal box (variant)

Terminal box fitted at the side of the housing for connection of the power supply and peripheral components of the unit. Plastic casing, protection rating IP 56. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components as well as connection terminals for the following signals:
 - Input Enable fan
 - Input Control signal fan
 - Output Control signal next fan
 - Input Control signal actuator Air-Injector
 - Output Control signal next actuator Air-Injector
 - Output Feedback control signal Air-Injector
 - Output Error
- The following sensors and actuators in the unit are factory-wired:
 - Fan
 - Supply air temperature sensor
 - Actuator Air-Injector

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Filter box

Housing made of magnesium zinc sheet with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Flat filter box

Housing made of magnesium zinc sheet with 4 pleated ISO coarse 60% cell filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Recirculation silencer

As an attachment to the unit, made of magnesium zinc sheet, lined with sound insulation matting, insertion attenuation 3 dB.

Acoustic cowl

Consisting of an absorber hood of large volume, insertion attenuation 4 dB.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.

Pump control for mixing or injection system

Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

Return temperature sensor

Temperature sensor for monitoring the heating medium.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:

VE Ventilation, infinitely variably adjustment

AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:

- CO₂ or VOC
- Air humidity (optimised dehumidification mode)

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

EA Exhaust air, infinitely variably adjustment

SA Supply air, infinitely variably adjustment

ST Standby

- Main operating modes of supply air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

SA Supply air, infinitely variably adjustment

With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC

ST Standby

- Main operating modes of recirculated air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

ST Standby

- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

4.4 EasyTronic EC

Room temperature controller with timer for TopVent® TH, TC, CH, CC, TV recirculation units and TopVent® TW air curtains, protection rating IP 30, with the following functions:

- Recording the room temperature with the integrated temperature sensor
- Connection option for external room temperature sensor
- Room temperature control in on/off mode
- Lowering of the room temperature setpoint value via week programme
- Unit control depending on a door contact switch
- Manual adjustment of the fan speed
- Manual adjustment of air distribution with the Hoval Air-Injector from vertical to horizontal (for TopVent® TH, TC, CH, CC)
- Signal for switching a pump or a valve
- Fan off delay in cooling mode
- External heating/cooling changeover
- Alarm display
- Connection to the building management system via Modbus RTU

Options

- External room temperature sensor (protection rating IP 65)

TopVent® TC

Recirculation units for heating and cooling spaces up to 25 m in height
with central heat and cold supply (2-pipe-system)

| | |

1 Use

1.1 Intended use

TopVent® TC units are recirculation units for heating and cooling spaces up to 25 m in height with central heat and cold supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Cooling (with connection to a water chiller)
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration (option)

The TopVent® TC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® TC unit consists of the following components:

- Fan unit:
Diagonal fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating/cooling section:
Contains the heating/cooling coil for heating and cooling the supply air with hot water or cold water and the condensate separator for the condensate generated
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.

As part of the TopTronic® C control system, the unit control box is an integral component.

Fig. C3: TopVent® TC function diagram

2.3 Operating modes

The TopVent® TC has the following operating modes:

- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® TC unit can operate individually in a local operating mode: Off, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|-------|---|--|---|
| REC | Recirculation On/Off operation: during heat or cool demand, the unit draws in room air, heats or cools it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat or cool demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Heating/cooling off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Heating/cooling off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Heating on |
| OPR | ■ Overheating protection: If the room temperature rises above the set value for overheating protection, the unit cools down the room in recirculation operation. | | Fan speed 2 Cooling on |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Heating/cooling off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating is activated by connecting the unit to a power supply (only if there is no bus connection to the zone controller). For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 Heating on |

4 Specification texts

4.1 TopVent® TC

Recirculation unit for heating and cooling rooms up to 25 m in height with central heat and cold supply (2-pipe system); equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating/cooling section
- Air-Injector
- Unit control box or terminal box
- Optional components

The TopVent® TC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of radial fan with high-efficiency EC motor, backwards-curved, three-dimensional contoured blades and free-running rotor made of a high-performance composite material, aerodynamically optimised inflow nozzle, low-noise, with integrated overload protection (integrated in the heating/cooling section).

Heating/cooling section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with close-pored polyurethane.

The heating/cooling section contains:

- The highly efficient heating/cooling coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water and cold water supply
- The pull-out condensate separator with collecting channel, made of high-quality corrosion-resistant material, with a downslope in all directions for rapid draining
- The condensate trap for connecting to a condensate drain (supplied)

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with closed-cell polyethylene foam, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Plastic casing, protection rating IP 56. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating/cooling valve
 - Heating/cooling pump
 - Return temperature sensor
 - Condensate pump
 - Door contact

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Terminal box (variant)

Terminal box fitted at the side of the housing for connection of the power supply and peripheral components of the unit. Plastic casing, protection rating IP 56. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components as well as connection terminals for the following signals:
 - Input Enable fan
 - Input Control signal fan
 - Output Control signal next fan
 - Input Control signal actuator Air-Injector
 - Output Control signal next actuator Air-Injector
 - Output Feedback control signal Air-Injector
 - Output Error
- The following sensors and actuators in the unit are factory-wired:
 - Fan
 - Supply air temperature sensor
 - Actuator Air-Injector

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Filter box

Housing made of magnesium zinc sheet with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Flat filter box

Housing made of magnesium zinc sheet with 4 pleated ISO coarse 60% cell filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Recirculation silencer

As an attachment to the unit, made of magnesium zinc sheet, lined with sound insulation matting, insertion attenuation 3 dB.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.

Condensate pump

Consisting of a centrifugal pump and a drip tray, max. delivery rate of 150 l/h with a delivery head of 3 m. Condensate pump with connection cable enclosed.

Pump control for mixing or injection system

Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

Return temperature sensor

Temperature sensor for monitoring the heating medium.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:

VE Ventilation, infinitely variably adjustment

AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:

- CO₂ or VOC
- Air humidity (optimised dehumidification mode)

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

EA Exhaust air, infinitely variably adjustment

SA Supply air, infinitely variably adjustment

ST Standby

- Main operating modes of supply air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

SA Supply air, infinitely variably adjustment

With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC

ST Standby

- Main operating modes of recirculated air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

ST Standby

- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

4.4 EasyTronic EC

Room temperature controller with timer for TopVent® TH, TC, CH, CC, TV recirculation units and TopVent® TW air curtains, protection rating IP 30, with the following functions:

- Recording the room temperature with the integrated temperature sensor
- Connection option for external room temperature sensor
- Room temperature control in on/off mode
- Lowering of the room temperature setpoint value via week programme
- Unit control depending on a door contact switch
- Manual adjustment of the fan speed
- Manual adjustment of air distribution with the Hoval Air-Injector from vertical to horizontal (for TopVent® TH, TC, CH, CC)
- Signal for switching a pump or a valve
- Fan off delay in cooling mode
- External heating/cooling changeover
- Alarm display
- Connection to the building management system via Modbus RTU

Options

- External room temperature sensor (protection rating IP 65)

TopVent® THC

Recirculation units for heating and cooling spaces up to 25 m in height with central heat and cold supply (4-pipe-system)

1 Use

1.1 Intended use

TopVent® THC units are recirculation units for heating and cooling spaces up to 25 m in height with central heat and cold supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Cooling (with connection to a water chiller)
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration (option)

The TopVent® THC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® THC unit consists of the following components:

- Fan unit:
Diagonal fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating section:
Contains the heating coil for heating the supply air with hot water
- Cooling section:
Contains the cooling coil for cooling the supply air with cold water and the condensate separator for the condensate generated
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.

As part of the TopTronic® C control system, the unit control box is an integral component.

2.3 Operating modes

The TopVent® THC has the following operating modes:

- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® THC unit can operate individually in a local operating mode:
Off, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|-------|---|--|---|
| REC | Recirculation On/Off operation: during heat or cool demand, the unit draws in room air, heats or cools it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat or cool demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Heating/cooling off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Heating/cooling off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Heating on |
| OPR | ■ Overheating protection: If the room temperature rises above the set value for overheating protection, the unit cools down the room in recirculation operation. | | Fan speed 2 Cooling on |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Heating/cooling off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating is activated by connecting the unit to a power supply (only if there is no bus connection to the zone controller). For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 Heating on |

4 Specification texts

4.1 TopVent® THC

Recirculation unit for heating and cooling rooms up to 25 m in height with central heat and cold supply (4-pipe system); equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating section
- Cooling section
- Air-Injector
- Unit control box
- Optional components

The TopVent® THC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of radial fan with high-efficiency EC motor, backwards-curved, three-dimensional contoured blades and free-running rotor made of a high-performance composite material, aerodynamically optimised inflow nozzle, low-noise, with integrated overload protection (integrated in the cooling section).

Heating section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials.

The heating section contains:

- The highly efficient heating coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water supply

Cooling section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with close-pored polyurethane.

The cooling section contains:

- The highly efficient cooling coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the cold water supply

- The pull-out condensate separator with collecting channel, made of high-quality corrosion-resistant material, with a downslope in all directions for rapid draining
- The condensate trap for connecting to a condensate drain (supplied)

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with closed-cell polyethylene foam, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Plastic casing, protection rating IP 56. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating/cooling valve
 - Heating/cooling pump
 - Return temperature sensor
 - Condensate pump
 - Door contact

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Filter box

Housing made of magnesium zinc sheet with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Flat filter box

Housing made of magnesium zinc sheet with 4 pleated ISO coarse 60% cell filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Recirculation silencer

As an attachment to the unit, made of magnesium zinc sheet, lined with sound insulation matting, insertion attenuation 3 dB.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.

Condensate pump

Consisting of a centrifugal pump and a drip tray, max. delivery rate of 150 l/h with a delivery head of 3 m. Condensate pump with connection cable enclosed.

Pump control for mixing or injection system

Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:
 - VE Ventilation, infinitely variably adjustment
 - AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:
 - CO₂ or VOC
 - Air humidity (optimised dehumidification mode)
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - EA Exhaust air, infinitely variably adjustment
 - SA Supply air, infinitely variably adjustment
 - ST Standby
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

TopVent® MH

Supply air units for ventilating and heating spaces up to 25 m in height with central heat supply

| 1 Use | 46 |
| 2 Construction and operation | 46 |
| 3 Technical data | 50 |
| 4 Specification texts | 53 |

1 Use

1.1 Intended use

TopVent® MH units are supply air units for ventilating and heating spaces up to 25 m in height with central heat supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Fresh air supply
- Mixed air operation
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration

The TopVent® MH unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® MH unit consists of the following components:

- Fan unit:
Diagonal fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating section:
Contains the heating coil for heating the supply air with hot water
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.
- Filter box:
Contains 2 ISO Coarse 60 % bag filters (G4), easily accessible behind the sliding door
- Mixed air box:
Contains fresh air damper and recirculation damper linked to move in opposite directions and actuator with spring return

As part of the TopTronic® C control system, the unit control box is an integral component.

Fig. E3: TopVent® MH function diagram

2.3 Operating modes

The TopVent® MH operates in the following modes:

- Supply air speed 2
- Supply air speed 1
- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® MH unit can operate individually in a local operating mode:
Off, Supply air speed 2, Supply air speed 1, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|------|---|--|---|
| SA2 | Supply air speed 2 The fan runs at speed 2 (high air flow rate). The room temperature set value day is active. The unit blows fresh air into the room. The control of the fresh air ratio can be selected: | | |
| | <u>Fixed fresh air ratio:</u> The unit operates continuously with the set fresh air ratio. The system controls the heating according to the heating demand. |  | Fan speed 2 Fresh air damper 10 % open ¹⁾ Heating 0-100 % ²⁾ ¹⁾ Percentage is adjustable ²⁾ Depending on heat demand |
| | <u>Variable fresh air ratio:</u> <ul style="list-style-type: none"> ■ The system regulates the fresh air ratio depending on the temperature. The set fresh air ratio serves as a minimum value. If the temperature conditions permit, more fresh air is brought into the room and used for free heating or free cooling. Only when this potential is fully utilised is the heating switched on via the coil if required. ■ If a combination sensor for room air is installed (option), the system additionally controls the fresh air ratio depending on the air quality. <ul style="list-style-type: none"> – If there is no heat demand, the fresh air damper is opened 100% if the indoor air quality is too poor. – When the setpoint value for the CO₂ or VOC content of the room air is reached, the fresh air damper closes again to the set minimum value. | | Fan speed 2 Fresh air damper MIN-100 % open ¹⁾ Heating 0-100 % ²⁾ ¹⁾ A minimum value can be set ²⁾ Depending on heat demand |
| |  Notice In order to save heating energy, the unit only operates with the set minimum fresh air rate when heat is required. | | |
| SA1 | Supply air speed 1 The same as SA2, but the fan operates at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper MIN-100 % open ¹⁾ Heating 0-100 % ¹⁾ Fixed or variable (see above) |

| Code | Operating mode | | Description |
|-------|--|--|---|
| REC | Recirculation On/off-operation: If heating is required, the unit draws in room air, heats it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Fresh air damper..... closed Heating on ¹⁾ ¹⁾ Depending on heat demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Fresh air damper..... closed Heating off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper..... closed Heating on ¹⁾ ¹⁾ Depending on heat demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Fresh air damper..... closed Heating off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Fresh air damper..... closed Heating on |
| NCS | ■ Night cooling: If the room temperature exceeds the set value for night cooling and the current fresh air temperature permits it, the unit blows cool fresh air into the room and extracts warmer room air. |  | Fan speed 2 Fresh air damper..... open Heating off |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Fresh air damper..... closed Heating off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating can be activated and set as required by the Hoval service technician. For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 ¹⁾ Fresh air damper..... closed ¹⁾ Heating on ¹⁾ ¹⁾ Adjustable by the Hoval service technician |

4 Specification texts

4.1 TopVent® MH

Supply air unit for heating rooms up to 25 m in height with central heat supply; equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating section
- Air-Injector
- Filter box
- Mixed air box
- Unit control box
- Optional components

The TopVent® MH unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of maintenance-free, direct-drive axial fan with high-efficiency EC motor and balanced rotating wheel with aerodynamically shaped blades and serrated trailing edge (integrated in the heating section).

Heating section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials.

The heating section contains:

- The highly efficient heating coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water supply

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Filter box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Mixed air box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with fresh air damper and recirculation damper linked to move in opposite directions; includes actuator with spring return, factory-wired to the circuit board in the unit control box.

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Housing made of coated sheet steel (light grey RAL 7035), protection rating IP 54. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating valve
 - Heating pump
 - Return temperature sensor
 - Forced off

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Acoustic cowl

Consisting of an absorber hood of large volume, insertion attenuation 4 dB.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.
Pump control for mixing or injection system:
Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

Return temperature sensor

Temperature sensor for monitoring the heating medium.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:
 - VE Ventilation, infinitely variably adjustment
 - AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:
 - CO₂ or VOC
 - Air humidity (optimised dehumidification mode)
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - EA Exhaust air, infinitely variably adjustment
 - SA Supply air, infinitely variably adjustment
 - ST Standby
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

TopVent® MC

Supply air units for ventilating, heating and cooling spaces up to 25 m in height with central heat and cold supply (2-pipe-system)

| | |

| 1 Use | 58 |
| 2 Construction and operation | 58 |
| 3 Technical data | 62 |
| 4 Specification texts | 66 |

1 Use

1.1 Intended use

TopVent® MC units are supply air units for ventilating, heating and cooling spaces up to 25 m in height with central heat and cold supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Cooling (with connection to a water chiller)
- Fresh air supply
- Mixed air operation
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration

The TopVent® MC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® MC unit consists of the following components:

- Fan unit:
Diagonal fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating/cooling section:
Contains the heating/cooling coil for heating and cooling the supply air with hot water or cold water and the condensate separator for the condensate generated
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.
- Filter box:
Contains 2 ISO Coarse 60 % bag filters (G4), easily accessible behind the sliding door
- Mixed air box:
Contains fresh air damper and recirculation damper linked to move in opposite directions and actuator with spring return

As part of the TopTronic® C control system, the unit control box is an integral component.

2.3 Operating modes

The TopVent® MC has the following operating modes:

- Supply air speed 2
- Supply air speed 1
- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® MC unit can operate individually in a local operating mode:
Off, Supply air speed 2, Supply air speed 1, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|------|---|--|---|
| SA2 | Supply air speed 2 The fan runs at speed 2 (high air flow rate). The room temperature set value day is active. The unit blows fresh air into the room. The control of the fresh air ratio can be selected: | | |
| | <u>Fixed fresh air ratio:</u> The unit operates continuously with the set fresh air ratio. The system controls the heating/cooling according to the heating/cooling demand. |  | Fan speed 2 Fresh air damper 10 % open ¹⁾ Heating/cooling 0-100 % ²⁾ ¹⁾ Percentage is adjustable ²⁾ Depending on heat or cool demand |
| | <u>Variable fresh air ratio:</u> <ul style="list-style-type: none"> ■ The system regulates the fresh air ratio depending on the temperature. The set fresh air ratio serves as a minimum value. If the temperature conditions permit, more fresh air is brought into the room and used for free heating or free cooling. Only when this potential is fully utilised is the heating/cooling switched on via the coil if required. ■ If a combination sensor for room air is installed (option), the system additionally controls the fresh air ratio depending on the air quality. <ul style="list-style-type: none"> – If there is no heat demand, the fresh air damper is opened 100% if the indoor air quality is too poor. – When the setpoint value for the CO₂ or VOC content of the room air is reached, the fresh air damper closes again to the set minimum value. | | Fan speed 2 Fresh air damper MIN-100 % open ¹⁾ Heating/cooling 0-100 % ²⁾ ¹⁾ A minimum value can be set ²⁾ Depending on heat or cool demand |
| |  Notice In order to save heating energy, the unit only operates with the set minimum fresh air rate when heat is required. | | |
| SA1 | Supply air speed 1 The same as SA2, but the fan operates at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper MIN-100 % open ¹⁾ Heating/cooling 0-100 % ¹⁾ Fixed or variable (see above) |

| Code | Operating mode | | Description |
|--------------|--|--|--|
| REC | Recirculation On/Off operation: during heat or cool demand, the unit draws in room air, heats or cools it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Fresh air damper closed Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat or cool demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Fresh air damper closed Heating/cooling off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper closed Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Fresh air damper closed Heating/cooling off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Fresh air damper closed Heating on |
| OPR | ■ Overheating protection: If the room temperature rises above the set value for overheating protection, the unit cools down the room in recirculation operation. |  | Fan speed 2 Fresh air damper closed Cooling on |
| NCS | ■ Night cooling: If the room temperature exceeds the set value for night cooling and the current fresh air temperature permits it, the unit blows cool fresh air into the room and extracts warmer room air. |  | Fan speed 2 Fresh air damper open Heating/cooling off |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Fresh air damper closed Heating/cooling off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating can be activated and set as required by the Hoval service technician. For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 ¹⁾ Fresh air damper closed ¹⁾ Heating on ¹⁾ ¹⁾ Adjustable by the Hoval service technician |

4.1 TopVent® MC

Supply air unit for heating and cooling rooms up to 25 m in height with central heat and cold supply (2-pipe system); equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating/cooling section
- Air-Injector
- Filter box
- Mixed air box
- Unit control box
- Optional components

The TopVent® MC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of radial fan with high-efficiency EC motor, backwards-curved, three-dimensional contoured blades and free-running rotor made of a high-performance composite material, aerodynamically optimised inflow nozzle, low-noise, with integrated overload protection (integrated in the heating/cooling section).

Heating/cooling section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with close-pored polyurethane.

The heating/cooling section contains

- The highly efficient heating/cooling coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water and cold water supply
- The pull-out condensate separator with collecting channel, made of high-quality corrosion-resistant material, with a downslope in all directions for rapid draining
- The condensate trap for connecting to a condensate drain (supplied)

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of

ageing-resistant, silicone-free sealing materials, internally insulated with closed-cell polyethylene foam, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Filter box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Mixed air box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with fresh air damper and recirculation damper linked to move in opposite directions; includes actuator with spring return, factory-wired to the circuit board in the unit control box.

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Housing made of coated sheet steel (light grey RAL 7035), protection rating IP 54. The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating/cooling valve
 - Heating/cooling pump
 - Return temperature sensor
 - Condensate pump
 - Forced off

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.

Condensate pump

Consisting of a centrifugal pump and a drip tray, max. delivery rate of 150 l/h with a delivery head of 3 m. Condensate pump with connection cable enclosed.

Pump control for mixing or injection system

Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

Return temperature sensor

Temperature sensor for monitoring the heating medium.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:
VE Ventilation, infinitely variably adjustment
AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:
 - CO₂ or VOC
 - Air humidity (optimised dehumidification mode)
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - EA Exhaust air, infinitely variably adjustment
 - SA Supply air, infinitely variably adjustment
 - ST Standby
-
- Main operating modes of supply air units:
REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
-
- Main operating modes of recirculated air units:
REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
-
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
 - Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - SA Supply air, infinitely variably adjustment
 - With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC
 - ST Standby
- Main operating modes of recirculated air units:
 - REC . Recirculation, infinitely variably adjustment
 - DES.. Destratification
 - ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

TopVent® MHC

Supply air units for ventilating, heating and cooling spaces up to 25 m in height with central heat and cold supply (4-pipe-system)

1 Use

1.1 Intended use

TopVent® MHC units are supply air units for ventilating, heating and cooling spaces up to 25 m in height with central heat and cold supply. They have the following functions:

- Heating (with connection to a hot water supply)
- Cooling (with connection to a water chiller)
- Fresh air supply
- Mixed air operation
- Recirculation operation
- Air distribution and destratification with adjustable Air-Injector
- Air filtration

The TopVent® MHC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

The Hoval TopTronic® C integrated control system ensures energy-efficient, demand-based operation of Hoval indoor climate systems.

Intended use also includes compliance with the operating instructions. Any usage over and above this use is considered to be not as intended. The manufacturer can accept no liability for damage resulting from improper use.

1.2 User group

The units are only allowed to be installed, operated and maintained by authorised and instructed personnel who are well acquainted with the units and are informed about possible dangers.

2 Construction and operation

2.1 Construction

The TopVent® MHC unit consists of the following components:

- Fan unit:
Diagonal fan with energy-saving EC motor, maintenance-free and infinitely variable
- Heating section:
Contains the heating coil for heating the supply air with hot water
- Cooling section:
Contains the cooling coil for cooling the supply air with cold water and the condensate separator for the condensate generated
- Air-Injector:
The Air-Injector is a patented, infinitely variable vortex air distributor for the draught-free introduction of air into the hall under changing operating conditions.
- Filter box:
Contains 2 ISO Coarse 60 % bag filters (G4), easily accessible behind the sliding door
- Mixed air box:
Contains fresh air damper and recirculation damper linked to move in opposite directions and actuator with spring return

As part of the TopTronic® C control system, the unit control box is an integral component.

2.3 Operating modes

The TopVent® MHC has the following operating modes:

- Supply air speed 2
- Supply air speed 1
- Recirculation
- Recirculation speed 1
- Standby

The TopTronic® C control system regulates these operating modes automatically for each control zone in accordance with the specifications in the calendar. The following points also apply:

- The operating mode of a control zone can be switched over manually.
- Each TopVent® MHC unit can operate individually in a local operating mode:
Off, Supply air speed 2, Supply air speed 1, Recirculation, Recirculation speed 1.

| Code | Operating mode | | Description |
|------|---|--|---|
| SA2 | Supply air speed 2 The fan runs at speed 2 (high air flow rate). The room temperature set value day is active. The unit blows fresh air into the room. The control of the fresh air ratio can be selected: | | |
| | <u>Fixed fresh air ratio:</u> The unit operates continuously with the set fresh air ratio. The system controls the heating/cooling according to the heating/cooling demand. |  | Fan speed 2 Fresh air damper 10 % open ¹⁾ Heating/cooling 0-100 % ²⁾ ¹⁾ Percentage is adjustable ²⁾ Depending on heat or cool demand |
| | <u>Variable fresh air ratio:</u> <ul style="list-style-type: none"> ■ The system regulates the fresh air ratio depending on the temperature. The set fresh air ratio serves as a minimum value. If the temperature conditions permit, more fresh air is brought into the room and used for free heating or free cooling. Only when this potential is fully utilised is the heating/cooling switched on via the coil if required. ■ If a combination sensor for room air is installed (option), the system additionally controls the fresh air ratio depending on the air quality. <ul style="list-style-type: none"> – If there is no heat demand, the fresh air damper is opened 100% if the indoor air quality is too poor. – When the setpoint value for the CO₂ or VOC content of the room air is reached, the fresh air damper closes again to the set minimum value. | | Fan speed 2 Fresh air damper MIN-100 % open ¹⁾ Heating/cooling 0-100 % ²⁾ ¹⁾ A minimum value can be set ²⁾ Depending on heat or cool demand |
| |  Notice In order to save heating energy, the unit only operates with the set minimum fresh air rate when heat is required. | | |
| SA1 | Supply air speed 1 The same as SA2, but the fan operates at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper MIN-100 % open ¹⁾ Heating/cooling 0-100 % ¹⁾ Fixed or variable (see above) |

| Code | Operating mode | | Description |
|--------------|--|--|--|
| REC | Recirculation On/Off operation: during heat or cool demand, the unit draws in room air, heats or cools it and blows it back into the room. The room temperature set value day is active. |  | Fan speed 1/2 ¹⁾ Fresh air damper closed Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: To avoid heat build-up under the ceiling, it may be appropriate to switch on the fan when there is no heat or cool demand (either in permanent operation or in on/off operation depending on the temperature stratification, as desired). | | Fan speed 2 Fresh air damper closed Heating/cooling off |
| REC1 | Recirculation speed 1 The same as REC, but the unit operates only at speed 1 (low air flow rate) |  | Fan speed 1 Fresh air damper closed Heating/cooling on ¹⁾ ¹⁾ Depending on heat or cool demand |
| DES | ■ Destratification: The same as for REC, but the unit operates only at speed 1 | | Fan speed 1 Fresh air damper closed Heating/cooling off |
| ST | Standby The unit is ready for operation. The following operating modes are activated if required: |  | |
| CPR | ■ Cooling protection: If the room temperature drops below the set value for cooling protection, the unit heats up the room in recirculation operation. |  | Fan speed 2 Fresh air damper closed Heating on |
| OPR | ■ Overheating protection: If the room temperature rises above the set value for overheating protection, the unit cools down the room in recirculation operation. |  | Fan speed 2 Fresh air damper closed Cooling on |
| NCS | ■ Night cooling: If the room temperature exceeds the set value for night cooling and the current fresh air temperature permits it, the unit blows cool fresh air into the room and extracts warmer room air. |  | Fan speed 2 Fresh air damper open Heating/cooling off |
| L_OFF | Off (local operating mode) The unit is switched off. Frost protection for the unit remains active. |  | Fan off Fresh air damper closed Heating/cooling off |
| – | Forced heating The unit draws in room air, warms it and blows it back into the room. Forced heating can be activated and set as required by the Hoval service technician. For example, it is suitable for heating the hall before taking the control system into operation or if the controller fails during the heating period. |  | Fan speed 2 ¹⁾ Fresh air damper closed ¹⁾ Heating on ¹⁾ ¹⁾ Adjustable by the Hoval service technician |

4 Specification texts

4.1 TopVent® MHC

Supply air unit for heating and cooling rooms up to 25 m in height with central heat and cold supply (4-pipe system); equipped with highly efficient air distributor.

The unit consists of the following components:

- Fan unit
- Heating section
- Cooling section
- Air-Injector
- Filter box
- Mixed air box
- Unit control box
- Optional components

The TopVent® MHC unit complies with all the requirements of the Ecodesign Directive 2009/125/EC relating to environmentally friendly design of energy-related products. It is a system of the 'fan coil unit' type, provided for in Commission Regulation (EU) 2016/2281.

Fan unit

Consisting of radial fan with high-efficiency EC motor, backwards-curved, three-dimensional contoured blades and free-running rotor made of a high-performance composite material, aerodynamically optimised inflow nozzle, low-noise, with integrated overload protection (integrated in the cooling section).

Heating section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with EPDM.

The heating section contains:

- The highly efficient heating coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the hot water supply

Cooling section

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with close-pored polyurethane.

The cooling section contains:

- The highly efficient cooling coil consisting of seamless copper pipes with pressed-on, optimised and profiled aluminium fins and manifolds made of copper; for connection to the cold water supply
- The pull-out condensate separator with collecting channel, made of high-quality corrosion-resistant material, with a downslope in all directions for rapid draining
- The condensate trap for connecting to a condensate drain (supplied)

Air-Injector

Housing made of magnesium zinc sheet, air-tight, flame retardant, hygienic and easy to maintain because of ageing-resistant, silicone-free sealing materials, internally insulated with closed-cell polyethylene foam, with:

- Vortex air distributor with concentric outlet nozzle, adjustable vanes and integrated absorber hood
- Actuator for infinitely variable adjustment of the air distribution from vertical to horizontal
 - for draught-free air distribution in the hall under changing operating conditions
 - for the rapid and large-area reduction of temperature stratification in the room through induction of secondary air and strong mixing of the room air with supply air
- Supply air temperature sensor

Filter box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with 2 ISO coarse 60% bag filters (G4), with differential pressure switch for filter monitoring, factory-wired to the circuit board in the unit control box.

Mixed air box

Housing made of magnesium zinc sheet, internally insulated with closed-cell polyethylene foam, with fresh air damper and recirculation damper linked to move in opposite directions; includes actuator with spring return, factory-wired to the circuit board in the unit control box.

Unit control box

Control box fitted at the side of the unit for connection of the power supply and housing the control components that facilitate energy-optimised operation, controlled by the control system TopTronic® C. Housing made of coated sheet steel (light grey RAL 7035), protection rating IP 54.

The following components are installed:

- Isolation switch
- Circuit board with all required electrical components, unit controller (clipped on) as well as connection terminals for the following external connections:
 - Heating/cooling valve
 - Heating/cooling pump
 - Return temperature sensor
 - Condensate pump
 - Forced off

The circuit board is fitted with push-in terminals facilitating easy installation of the connection cables. All components in the unit control box as well as sensors and actuators in the unit are fully factory-wired.

Power supply and bus connection to be installed on site.

Pump control for mixing or injection system

Electrical components for controlling a mixing or injection circuit in the load circuit, factory-installed in the unit control box.

Return temperature sensor

Temperature sensor for monitoring the heating medium.

Options for the unit

Suspension set

For ceiling installation of the unit consisting of 4 pairs U-profiles made of magnesium zinc sheet, height-adjustable to 1300 mm.

Standard paint finish

Exterior painting in Hoval red (RAL 3000), including optional components and suspension set.

Paint finish as desired

Exterior painting of the unit in choice of RAL colour, including optional components and suspension set.

Hydraulic assembly diverting system

Prefabricated assembly for hydraulic diverting system, consisting of mixing valve, regulating valve, ball valve, automatic air vent and screw connections for connection to the unit and to the distributor circuit; mixing valve with plug-in connection, sized for the coil in the unit and the Hoval TopTronic® C control system.

Mixing valve

Mixing valve with modulating rotary actuator and plug-in connection, sized for the coil in the unit.

Condensate pump

Consisting of a centrifugal pump and a drip tray, max. delivery rate of 150 l/h with a delivery head of 3 m. Condensate pump with connection cable enclosed.

4.2 TopTronic® C – System control

Zone-based control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 64 control zones with up to 10 supply and extract air handling units or supply air handling units and 10 recirculation air handling units each.

Zone allocation

Configured in advance for the customer at the factory:

| | Room designation | Unit type |
|---------|------------------|-----------|
| Zone 1: | _____ | _____ |
| Zone 2: | _____ | _____ |
| ... | | |

System structure

- Zone control panel made of coated sheet steel (light grey RAL 7035), ... x ... x ... mm, with:
 - System operator terminal
 - Fresh air temperature sensor
 - 1 zone controller and 1 room temperature sensor per zone (expandable to up to 4 room temperature sensors per zone)
 - Safety relay
 - Electrical cabinet internally pre-wired, all components routed to terminals
- Zone bus: as serial bus for communication with all controllers in one control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Heating/cooling demand per zone with feedback monitoring

Functions, standard

- Zone-based autonomous room control. Temperature and ventilation control separately adjustable for each zone
- Room temperature control via room-supply air cascade by means of energy-optimised double sequence control with priority circuit for energy recovery (supply and extract air handling units)
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 5 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer
 - Night cooling set value (free cooling) (supply and extract air handling units)
- Destratification mode for even temperature distribution

- Main operating modes of supply and extract air handling units:

VE Ventilation, infinitely variably adjustment

AQ.... Air quality, automatic control with Hoval combination sensor (option), optional reference variable:

- CO₂ or VOC
- Air humidity (optimised dehumidification mode)

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

EA Exhaust air, infinitely variably adjustment

SA Supply air, infinitely variably adjustment

ST Standby

- Main operating modes of supply air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

SA Supply air, infinitely variably adjustment

With Hoval combination sensor (option) also demand-driven control of the fresh air ratio, optional reference variable CO₂ or VOC

ST Standby

- Main operating modes of recirculated air units:

REC . Recirculation, infinitely variably adjustment

DES.. Destratification

ST Standby

- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- TopTronic® C-ST system operator terminal: touch panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Hoval C-SSR operating software, for visualisation on customer's PC
- TopTronic® C-ZT as zone operator terminal: for simple on-site operation of a control zone
- Manual operating selector switches
- Manual operating selector buttons
- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Alarm lamp
- Socket

Per zone:

- The change-over between heating and cooling can be either automatic or manual
 - Cooling lock switch for automatic changeover
 - Heating/cooling switch for manual changeover
- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Combination sensor fresh air temperature and humidity
- Transfer of actual values and setpoints from external systems (0...10 V; 4 - 20 mA)
- Load shedding input
- Signal for external extract air fan
- Operating selector switches on terminal
- Operating selector button on terminal
- Control of distributor pump, incl. power supply

Power distribution:

- Circuit breakers and output terminals for Hoval indoor climate units
- Safety relay (4-pin)

4.3 TopTronic® C – System control for TopVent® C-SYS

Control system for the energy-optimised operation of decentralised Hoval indoor climate systems. Maximum system size per system bus: 1 control zone with up to 6 supply air handling units and 10 recirculation air handling units.

System structure

- Zone control panel, designed as compact cabinet for wall installation, made of coated sheet steel (light grey RAL 7035), 380 × 300 × 210 mm, with:
 - Operating panel
 - Zone controller
 - Fresh air temperature sensor
 - 1 Room temperature sensor (expandable to up to 4 room temperature sensors)
 - Safety relay
 - Electrical cabinet internally pre-wired
- Zone bus: as serial bus for communication with all controllers in the control zone, with robust bus protocol via shielded, twisted bus cable (provided by the client)
- Unit controller: installed in the particular indoor climate unit, works autonomously according to the specifications of the zone controller
- Circuit board with external connections for:
 - Power supply
 - Zone bus
 - Room temperature sensors (max. 4)
 - Fresh air temperature sensor
 - Combination sensor room air quality, temperature and humidity
 - Collective alarm
 - Forced off
 - Heating demand
 - Setpoint heating demand
 - Fault heat supply
 - Cooling demand
 - Fault cold supply
 - External enabling heating/cooling (for automatic changeover)
 - External setting heating/cooling (for manual changeover)
 - Changeover valves heating/cooling
 - External setpoint fresh air ratio
 - Operating selector switch on terminal (digital)
 - Operating selector button on terminal

Functions, standard

- Room temperature control via sequential control of the coils
- Intelligent automatic heating to reach the desired room temperature at the switching time
- 4 adjustable room temperature set values per zone:
 - Cooling protection (lower setpoint in standby)
 - Overheating protection (upper setpoint in standby)
 - Room set value winter
 - Room set value summer

- Destratification mode for even temperature distribution
- Main operating modes of supply air units:
 REC . Recirculation, infinitely variably adjustment
 DES.. Destratification
 SA Supply air, infinitely variably adjustment
 With Hoval combination sensor (option) also
 demand-driven control of the fresh air ratio, optional
 reference variable CO₂ or VOC
 ST Standby
- Main operating modes of recirculated air units:
 REC . Recirculation, infinitely variably adjustment
 DES.. Destratification
 ST Standby
- Forced heating (construction site heating) can be activated on each device before completion of the overall system (activation by Hoval service technician)
- Control of draught-free air distribution with the Hoval Air-Injector: the discharge direction is adjusted infinitely variably and automatically according to the respective operating condition and the existing temperatures (heating/cooling).

Operation

- Operating panel with LCD display, installed in the door of the zone control panel for visualisation and control of all Hoval indoor climate units registered on the bus

Options for operation

- Operating of the units via building management system via standardised interfaces:
 - BACnet
 - Modbus IP
 - Modbus RTU

Alarms, protection

- Central alarm management with registration of all alarms (timestamp, priority, status) in an alarm list and alarm memory of the last 50 alarms; forwarding via e-mail can be set in the parameters.
- If there is a failure of communication, bus stations, sensor systems or supply media, each part of the system transitions to a protection mode which safeguards operation.
- A maintenance mode implemented in the control algorithm for testing all physical data points and alarms guarantees high reliability.
- Pre-programmed data points retrievable via logger function for 1 year

Options for the zone control panel

- Additional room temperature sensors (max. 3)
- Combination sensor room air quality, temperature and humidity
- Signal for external extract air fan

Table H2: Type code and availability of supply air units

2 Outlet nozzle

For low-cost recirculation heating the TopVent® TH unit is available with a simple outlet nozzle. The air discharge angle cannot be adjusted. Units with outlet nozzle are well-suited for applications with lower comfort requirements and for large mounting heights (e.g. in high-bay warehouses).

The outlet nozzle replaces the Air-Injector. The external dimensions of the unit remain the same. The weight is reduced:

- Size 6: – 15 kg
- Size 9: – 21 kg

Fig. H1: TopVent® TH with outlet nozzle

3 Suspension set

A suspension set is available to make it easy to install the units on the ceiling. The set consists of 4 pairs of U-profiles made of magnesium zinc sheet and is height-adjustable up to 1300 mm.

Fig. H2: Suspension set

4 Air filtration

For hygiene reasons, Hoval recommends always fitting TopVent® units with a filter.

4.1 Filter box

A filter box with 2 bag filters can be installed for the purpose of filtering the recirculation air. The modular construction made of magnesium zinc sheet with 2 sliding doors makes it easy to replace the filters.

Notice

In the planning phase make sure there is enough space in front of the sliding doors so that the filters can be replaced with ease.

A pressure difference control device is installed for automatic monitoring of the filter. It shows when the filters have to be changed.

| Size | | | 6 | 9 |
|---|------------------|----|----------------------|------|
| A | mm | | 900 | 1100 |
| B | mm | | 400 | 400 |
| Filter class | | | ISO coarse 60 % (G4) | |
| Weight | | kg | 20 | 24 |
| Factory setting of differential pressure switches | TH, MH | Pa | 120 | 120 |
| | TC, THC, MC, MHC | Pa | 180 | 180 |

Table H3: Filter box technical data

4.2 Flat filter box

A flat filter box with 4 pleated cell filters can be installed for the purpose of filtering the recirculation air.

A pressure difference control device is installed for automatic monitoring of the filter. It shows when the filters have to be changed.

| Size | | | 6 | 9 |
|---|---------|----|----------------------|------|
| A | | mm | 900 | 1100 |
| B | | mm | 140 | 165 |
| Filter class | | | ISO coarse 60 % (G4) | |
| Weight | | kg | 10 | 12.5 |
| Factory setting of differential pressure switches | TH | Pa | 50 | 50 |
| | TC, THC | Pa | 100 | 100 |

Table H4: Flat filter box technical data

5 Paint finish

If the customer wishes, the units can be provided with an exterior paint finish. There are 2 possibilities:

- Standard paint finish in Hoval red (RAL 3000)
- Paint finish in desired RAL colour

6 Recirculation silencer

The use of a recirculation silencer for noise reduction is recommended mainly if the TopVent® units are installed under flat, hard ceilings (e.g. made of concrete or sheet steel). The recirculation silencer is mounted on the appliance and thus reduces the sound reflection from the ceiling. Insertion attenuation is 3 dB compared with the total sound power level of each TopVent® unit.

Mount the recirculation units as usual via the 4 fastening points in the heating or heating/cooling section (for example, using the optional suspension set).

Caution

Risk of injury from falling parts. The silencer cannot bear the weight of the appliance. Do not locate any suspension points on the silencer.

| Size | | | 6 | 9 |
|--------|--|----|-----|------|
| A | | mm | 900 | 1100 |
| B | | mm | 380 | 485 |
| Weight | | kg | 15 | 20 |

Table H5: Recirculation silencer dimensions and weights

7 Acoustic cowl

The acoustic cowl reduces the noise level in the room; it is installed in the Air-Injector. This does not change the outside dimensions of the Air-Injector.

Insertion attenuation is 4 dB compared with the total sound power level of each TopVent® unit.

8 Hydraulic assembly diverting system

Assemblies for hydraulic diverting, which are optimally matched to the units, are available for easy installation of TopVent® units. Please note the following:

- Install the assembly horizontally.
- Mount the assembly so that its weight does not need to be absorbed by the coil.
- Insulate the assembly.

Default settings for the hydraulic alignment

Read off the default settings from the diagrams below. The curves 1.0 to 4.0 correspond to the revolutions of the valve spindles of the balancing valve; they are shown on the turning knob:

0.0 ___ Valve closed

4.0 ___ Valve fully open

The coil and the hydraulic assembly are already included in the specified pressure drops. Thus, only consider the pressure drops of the distributor circuit up to the screw connections.

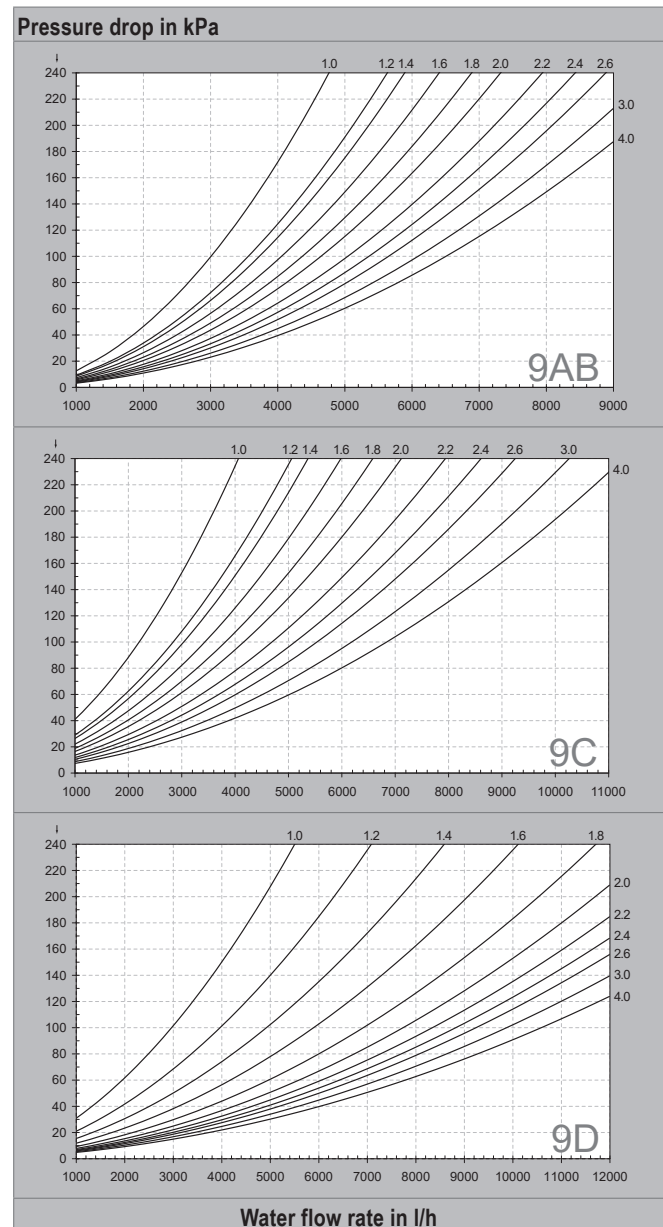

Fig. H3: Default settings for the balancing valves

- 1 Automatic air vent

| Operating range Y | 2...10 VDC |
| Position response U | 2...10 VDC |
| Actuator run time | 9 s / 90° |

Table H8: Mixing valves electrical data

9 Mixing valve

Mixing valves, which are optimally matched to the units, are available for easy installation of TopVent® units. They have the following specifications:

- 3-way mixing valve with modulating rotary actuator (run time 9 s)
- Flow characteristic:
 - Equal percentage control path
 - Linear bypass
- Integrated position control and response

| Type | DN | kvs m³/h | DA " | DI " | L mm | H mm | M mm | X mm | Y mm |
|-------|----|-------------|---------|---------|---------|---------|---------|---------|---------|
| M-6AB | 20 | 6.3 | G 1¼ | Rp ¾ | 86 | 46 | 42 | 220 | 90 |

| Operating range Y | 2...10 VDC |
| Position response U | 2...10 VDC |
| Actuator run time | 9 s / 90° |

Table H11: NRQ24A-SR mixing valves electrical data

10 Condensate pump

TopVent® cooling units must be connected to a condensate drainage system. For applications in which connection to the waste water system is too expensive or not possible for structural reasons, a condensate pump can be provided. This is installed directly under the condensate drain connection; the supplied container is prepared for installation on the unit. It pumps the condensate through a flexible hose to a delivery head of 3 m, thus enabling discharge of the condensate

- through waste water pipes directly below the ceiling,
- onto the roof.

| | | |
|----------------------------------|------|-----------------|
| Flow rate (at 3 m delivery head) | l/h | max. 150 |
| Tank capacity | l | max. 1.9 |
| Dimensions (L x W x H) | mm | 288 x 127 x 178 |
| Weight | kg | 2.4 |
| Nominal voltage | V AC | 230 |
| Power consumption | kW | 0.1 |
| Current consumption | A | 0.43 |

Table H12: Condensate pump technical data

Fig. H5: Condensate pump

11 Return temperature sensor

The return temperature sensor monitors the return temperature of the heating medium.

12 Pump control

Instead of the diverting circuit, a mixing or injection circuit can also be installed in the load circuit.

Please note the following:

- Not only the mixing valves but also the pumps in the load circuit are controlled directly by the unit control box.
- Terminals for wiring the mixing valves and the pumps in the load circuit are located in the unit control box.
- Make sure that valves and pumps which meet the following requirements are provided on site.

Requirements for mixing valves

- Use 3-way mixing valves with the following flow characteristics:
 - Equal percentage control path
 - Linear bypass
- The valve authority must be ≥ 0.5 .
- The maximum run time of the valve actuator is 45 s.
- The valve actuator must be continuous, i.e. the stroke changes in proportion to the control voltage (0...10 VDC or 2...10 VDC).
- The valve actuator must be designed with a position response (0...10 VDC or 2...10 VDC).
- The maximum power consumption is 20 VA.
- Install the valve close to the unit (max. distance 2 m).

Requirements for pumps

- Voltage230 VAC
- Total currentmax. 4.0 A for all pumps
(heating pump, cooling pump, condensate pump)

Requirements on changeover valves

Use changeover valves conforming to the following specification for heating and cooling in the 2-pipe system:

- 3-way changeover valves
- Supply voltage 24 V AC
- 1-wire control (0/24 V AC)
- Position response via limit switches (0°/90°)
- Power consumption:
 - max. 44 VA (TopTronic® C system control)
 - max. 13 VA (TopTronic® C system control for TopVent® C-SYS)

Transport and installation

| | |
|-------------------------------------|-----|
| 1 Installation | 100 |
| 2 Hydraulic installation | 101 |
| 3 Electrical installation | 105 |

1 Installation

1.1 Preparation

The following guidelines are important when preparing for installation:

- The scope of delivery includes:
 - TopVent® unit, delivered on a pallet
 - Accessories (installation material, trap, temperature sensors)
 - Optional components

TopVent® unit

- Make sure that a lifting platform is available.
- Only secure the unit to ceilings with sufficient load-bearing capacity.
- For the purposes of installation the unit is provided with 4 M10 rivet nuts with hexagon bolts and washers.
 - Fasten the unit to the ceiling by means of the optional suspension set or by means of flat iron bars, perforated bars, angles, steel cables or similar.
 - Do not use eyebolts.

1.2 Positioning

- Comply with the minimum and maximum distances.
- All air inlet and air outlet openings must be freely accessible. The supply air jet must be free to spread out unhindered.
- The access panels in the unit must be freely accessible.
- Clearance of at least 0.9 m is required for maintenance work around the heating/cooling section.

| Size | | | 6 | 9 |
|--|--------------------|---|----------------|-----|
| Distance from ceiling Z | min. | m | 0.3 | 0.4 |
| | max. ¹⁾ | m | Approx. 9...25 | |
| Mounting height Y | min. | m | 4 | 5 |
| Applications with higher comfort requirements | | | | |
| ■ Distance from wall W | max. | m | 12 | 15 |
| | min. | m | 6 | 7 |
| ■ Unit clearance X | max. | m | 23 | 31 |
| | min. | m | 12 | 14 |
| Applications with low comfort requirements | | | | |
| ■ Distance from wall W | max. | m | 15 | 20 |
| | min. | m | 6 | 7 |
| ■ Unit clearance X | max. | m | 30 | 41 |
| | min. | m | 12 | 14 |

1) The maximum mounting height varies depending on the boundary conditions (for values, see table of heat outputs or calculation with the 'HK-Select' selection program)

Table I1: Minimum and maximum distances

1.3 Unit installation

Proceed as follows to position the unit:

- Transport the unit to the installation site and rotate it to the correct position.
- Fasten the unit to the designated suspension points.
- Connect supply air units to a fresh air duct via a canvas connection and connect both flanges with an earth wire.

2 Hydraulic installation

2.1 Heating/cooling coil

The TopTronic® C control system is designed for a distributor circuit with separate hydraulic connection of the units; i.e. a mixing valve is installed in front of each unit. The diverting circuit is used as standard.

Requirements on the boiler system and the distributor circuit

- Hydraulically balance the pipework for the the individual units within a control zone to ensure even distribution.
- The heating medium must be available at the mixing valve without delay in the required amount and temperature.
- The condensate separator in cooling units only functions while the fan is running. No coolant must be allowed to circulate in the coil when the unit is switched off.
- Depending on local conditions, check whether compensators for linear expansion are required for the supply and return lines and/or articulated connections are required for the units.
- Do not fasten any loads to the coil, e.g. by means of the flow or return lines.
- Insulate the hydraulic lines.

The TopTronic® C control system switches on the heating/cooling pumps and the heating/cooling demand every day. This prevents the pumps from blocking in case of a long shutdown.

Requirements for mixing valves

- Use 3-way mixing valves with the following flow characteristics:
 - Equal percentage control path
 - Linear bypass
- The valve authority must be ≥ 0.5 .
- The maximum run time of the valve actuator is 45 s.
- The valve actuator must be continuous, i.e. the stroke changes in proportion to the control voltage (0...10 VDC or 2...10 VDC).
- The valve actuator must be designed with a position response (0...10 VDC or 2...10 VDC).
- The maximum power consumption is 20 VA.
- Install the valve close to the unit (max. distance 2 m).

Notice

Use the 'Hydraulic assembly' or 'Mixing valve' options for quick and easy hydraulic installation.

Requirements on changeover valves

Use changeover valves conforming to the following specification for heating and cooling in the 2-pipe system:

- 3-way changeover valves
- Supply voltage 24 V AC
- 1-wire control (0/24 V AC)
- Position response via limit switches (0°/90°)
- Power consumption:
 - max. 44 VA (TopTronic® C system control)
 - max. 13 VA (TopTronic® C system control for TopVent® C-SYS)

2.2 Condensate connection

Condensate arising in cooling units must be removed via a condensate-proof line.

- Install and insulate the supplied trap on the condensate connection of the unit.
- Dimension the slope and cross-section of the condensate line so that no condensate backflow takes place.
- Make sure that the condensate produced is drained in compliance with local regulations.
- Route the condensate line from the pump directly upwards.

Notice

Use the 'Condensate pump' option for quick and easy hydraulic installation.

Fig. I1: Condensate drain

Fig. I4: Schematic diagram for hydraulic diverting circuit TopVent® THC / MHC

3 Electrical installation

The electrical installation must only be carried out by a qualified electrician.

- Observe the relevant regulations (e.g. EN 60204-1).
- Choose the dimensions of the cable cross sections in line with the applicable regulations.
- Route signal and bus lines separately from mains cables.
- Make sure the lightning protection system for the units or for the entire building is planned and carried out by professionals.
- Provide overload protection equipment on site in the mains connection line of the zone control panel.
- Carry out the electrical installation according to the wiring diagram:
 - Power supply TopVent®
 - Zone bus based on system layout
 - Signal lines
- Connect optional components to the unit control box (condensate pump, return temperature sensor, mixing valve, pump).

3.1 Cable list for on-site connections – TopTronic® C

| Component | Designation | Voltage | Cable | Comments | Start | Target |

Notice

Use the 'HK-Select' program to design Hoval Indoor Climate Systems.
You can download it free of charge on the Internet.

1.1 Applications with higher comfort requirements (e.g. production halls, assembly halls, sports halls)

| Design data | Example |
|---|--|
| <ul style="list-style-type: none"> ■ Geometry of the room ■ Internal heat gains ■ People in the room ■ Heating and cooling with central energy supply (boiler and water chiller) ■ Improvement of air quality, fresh air supply for the people in the room (fresh air flow rate per person = 30 m³/h) | 50 × 60 × 12 m 28 kW 20 people |
| Design conditions heating: <ul style="list-style-type: none"> ■ Fabric heat losses ■ Fresh air temperature ■ Room temperature ■ Extract air temperature ■ Temperature of the heating medium | 350 kW - 15 °C 18 °C 20 °C 60 °C / 40 °C |
| Design conditions cooling: <ul style="list-style-type: none"> ■ Transmission sensible gains ■ Fresh air conditions ■ Room air conditions ■ Extract air temperature ■ Temperature of the cooling medium | 140 kW 32 °C / 40 %rh 26 °C / 40 %rh 28 °C 6 °C / 12 °C |
| Fresh air supply <ul style="list-style-type: none"> ■ Required fresh air flow rate in total: ■ Fresh air ratio of supply air units: max. 10 % of the nominal air flow rate <p><i>The fresh air ratio can be adjusted from 0...100 %. Where EU Regulation 1253/2014 applies, it must be restricted to max. 10 % in the design conditions.</i></p> <ul style="list-style-type: none"> ■ Calculate the required number of supply air units from the nominal air flow rate. | 20 × 30 = 600 m³/h Size 6: max. 600 m³/h fresh air Size 9: max. 900 m³/h fresh air → 1 TopVent® MC unit |
| Mounting height <ul style="list-style-type: none"> ■ Calculate the actual mounting height (= distance between the floor and the bottom edge of the units). $Y = \text{Hall height} - \text{distance from ceiling} - \text{unit height}$ ■ Compare the actual mounting height with the minimum and maximum mounting height (see Table I1 on page 100 and HK-Select). | <u>Supply air units:</u> Size 6 → OK Size 9 → OK <u>Recirculation units:</u> Size 6 → OK Size 9 → OK |

J

1.2 Applications with low comfort requirements (e.g. warehouses, logistics centres)

| Design data | Example | | | | | | | | | | | | | | | | | | | | | |
|---|---|----------|----|----------|--------|------------|----|--------|------------|----|--------|------------|----|--------|------------|----|--------|------------|----|--------|------------|----|
| <ul style="list-style-type: none">■ Geometry of the room■ Heating with central energy supply (boiler) | 181 × 105 × 12 m | | | | | | | | | | | | | | | | | | | | | |
| Design conditions heating: <ul style="list-style-type: none">■ Fabric heat losses■ Fresh air temperature■ Room temperature■ Extract air temperature■ Temperature of the heating medium | 892 kW - 15 °C 15 °C 18 °C 60 °C / 40 °C | | | | | | | | | | | | | | | | | | | | | |
| Mounting height <ul style="list-style-type: none">■ Calculate the actual mounting height (= distance between the floor and the bottom edge of the units). Y = Hall height – distance from ceiling – unit height■ Compare the actual mounting height with the minimum and maximum mounting height (see Table I1 on page 100 and HK-Select). | <u>Recirculation units:</u> Size 6 → OK Size 9 → OK | | | | | | | | | | | | | | | | | | | | | |
| Required number of recirculation units <ul style="list-style-type: none">■ Determine the required number of recirculation units based on the heat output. n = Fabric heat losses : heat output per unit■ Choose the final solution from the remaining possibilities, depending on the geometry of the hall and the costs. | <table><tr><th>Type</th><th>kW</th><th>Quantity</th></tr><tr><td>TH-6/A</td><td>892 : 18.8</td><td>48</td></tr><tr><td>TH-6/B</td><td>892 : 26.9</td><td>34</td></tr><tr><td>TH-6/C</td><td>892 : 45.0</td><td>20</td></tr><tr><td>TH-9/A</td><td>892 : 31.7</td><td>29</td></tr><tr><td>TH-9/B</td><td>892 : 40.6</td><td>22</td></tr><tr><td>TH-9/C</td><td>892 : 69.9</td><td>13</td></tr></table> | Type | kW | Quantity | TH-6/A | 892 : 18.8 | 48 | TH-6/B | 892 : 26.9 | 34 | TH-6/C | 892 : 45.0 | 20 | TH-9/A | 892 : 31.7 | 29 | TH-9/B | 892 : 40.6 | 22 | TH-9/C | 892 : 69.9 | 13 |

2 Maintenance schedule

| Activity | Interval |
|---|---|
| Renew air filter | When the filter alarm is displayed, at least annually |
| Comprehensively checking function; cleaning and possibly repairing the TopVent® units | Annually by Hoval customer service |

Further information

Hoval quality.
You can count on us.

Hoval

As a specialist in heating and climate technology, Hoval is your experienced partner for system solutions. For example, you can heat water with the sun's energy and your rooms with oil, gas, wood or a heat pump. Hoval ties together the various technologies and also integrates room ventilation into the system. So you can save energy while looking after the environment and your costs – and still enjoy the same level of comfort.

Hoval is one of the leading international companies for indoor climate solutions. More than 75 years of experience continuously motivate us to design innovative system solutions. We manufacture complete systems for heating, cooling and ventilation to more than 50 countries.

We take our responsibility for the environment seriously. Energy efficiency is at the heart of the heating and ventilation systems we design and develop.
